# FAST COMPUTER REPAIRS

## VIDEO VAULT INTERNATIONAL 10★ REPAIR SERVICE

Spectrums repaired for £19.95 inc. Parts, Insurance and P & P No Hidden Extras.
BBC, Commodore 64, Vic 20, Atari, Quoted for.
Are you fed up with waiting weeks for your Home Computer to be repaired!!!
Why not try the Experts, we offer a full repair service on any Home Computer.
All repairs carry a full 3 months guarantee, plus on every Spectrum repaired we send you a free game worth £5.95 for your enjoyment and pleasure.

- ★ **While you wait Service by Professional Computer Engineers.**
- ★ **3 Months written guarantee on all repairs.**
- ★ **International repair company.**
- ★ **All computers sent by mail order turned around in 24 hrs.**
- ★ **Most Spectrums repaired within 45 minutes.**
- ★ **All Micros insured for return journey.**
- ★ **Open 7 days a week.**
- ★ **School repairs undertaken-discounts available.**
- ★ **Free software with each Spectrum repaired worth £5.95.**
- ★ **Over 8 years experience working with computers.**

ONLY GENUINE SINCLAIR PARTS USED.
Phone today for your free estimate or send your computer to us with £1.75 (UK EIRE I.O.M. C.I.) or £6.50 (Europe/Scandinavia) we will contact you the same day by phone or 1st class Mail should you require quotation first.

BOOKED your holidays yet? It is still not too late to book a place on the *Sinclair Programs* holiday or one of the specially discounted **Dolphin** computer holidays.

We are offering reduced rates on any Dolphin computer holiday this summer. Holidays all include tuition, use of computers, software and hardware as well as the opportunity to improve dramatically your knowledge of your computer and of programming.

A computer holiday provides the ideal atmosphere for learning about computers at your own pace. There will be nobody waiting to use the television, no one fighting for use of your computer. What there will be is skilled tuition, the opportunity to work with friends or individually and the chance to try out the equipment you have always wanted.

Elsewhere in the magazine we have an early view of **Daley Thompson's Super Test,** a look at the game before it was completed. We are still publishing details of readers' highest scores on **Decathlon** and we should like to hear your highest scores on Supertest.

New in our letters section this month is a HELP! feature. **Got it Licked** gives hints on games, but do you ever look in vain for an essential hint to find we miss it month after month? Write in with a plea for help, and if anyone can answer it we will publish the answer in Got it Licked. Remember that we work a couple of months in advance, so we will not be able to publish answers to this month's questions until August.

Instructions for graphics characters are printed in lower-case letters in our listings. They are enclosed by brackets and separated by colons to distinguish them and the brackets and colons should not be entered.

Inverse characters are represented by the letter "i" and graphics characters by "g". Thus an inverse W would be represented by "iw", a graphics W by "gw", and an inverse graphics W by "igw".

Spaces are represented by "sp" and inverse spaces by "isp". Whenever any character is to be used more than once, the number of times it is to be used is shown before it, together with a multiplication sign. Thus "6★isp" means six inverse spaces and "(g4:4★i4:g3)" would be entered as a graphic four, followed by an inverse four repeated four times, followed by a graphics three.

Where whole words are to be written in inverse letters they appear in the listings as lower-case letters. Letters to be entered in graphics mode on the Spectrum are underlined.

Inverse characters may be entered on the ZX-81 by changing to graphics mode and then typing the appropriate characters and on the Spectrum by changing to inverse video and typing the appropriate letters. Graphics characters may be entered on the ZX-81 by changing to graphics mode and then pressing symbol shift while the appropriate characters are entered. On the Spectrum graphics characters may be obtained by changing to graphics mode and then pressing the appropriate character. User-defined graphics will appear as normal letters until the program has been RUN.

## Interactive BASIC Programming for 48K ZX Spectrum & Spectrum +

# ATTENTION ALL SPECTRUM USERS!

LEARN BASIC WITH YOUR HANDS ON THE KEYBOARD, NOT WITH YOUR HEAD IN A BOOK! Now you can learn ZX BASIC programming with your Spectrum. 'Interactive BASIC Programming' is a unique package in twelve parts. Look at these features:

* Plain English (yes, real English not jargonese).
* Due to an amazing programming technique you will have **complete** control over Spectrum BASIC. So you can write, save and load programs while using 'Interactive BASIC Programming'.
* All ZX BASIC is covered.
* You'll learn about graphics (see some on this ad), colour, sound, motion, system variables, menus and much more, explained simply.
* Problems are given with hints and answers in the form of programs that are put into BASIC for you to look at, run and alter.
* You'll learn how to write your own games (by way of examples) and how to put your machine to serious use (e.g. graphs, problem solving, filing system).
* More than 250K (yes, two hundred and fifty kilobytes).
* After sales support at no additional cost: write or telephone if you have any questions about Spectrum BASIC.
* **"An educational program which shows real inventiveness - better still it teaches Sinclair Basic."**

**- Popular Computing Weekly 7/3/85**

Britain is the Software Capital of the World - far superior to the U.S.A. The computer revolution is just beginning and as the emphasis shifts from hardware to software WE are best placed to shape the future. The writing's on the wall: get actively involved while the industry is young.

*(Amstrad, MSX, Atari 800XL, CBM 64, BBC/Electron versions are in preparation.)*

**To receive the whole package by return of post send £9.95 (p & p free) to:**

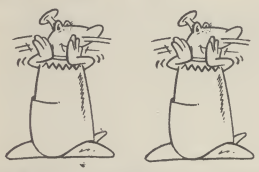
## Decathlon: beat that

WHILE playing **Daley Thompson's Decathlon** I have managed to throw the javelin 120 metres and 17 centimetres. I think this is quite good, but my best ever score was achieved when I scored an amazing 171 metres and 83 centimetres on the long jump.

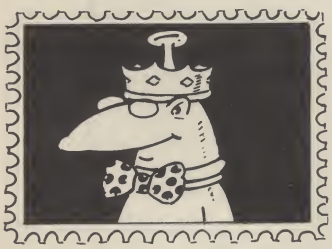
You probably will not believe me, but it is done by running really slowly and jumping well before the line and on a certain part of track after the jump line. The measuring man at the bottom is unable to find you, so your score rockets while he searches for you.

**Carl Mitchell,**
**Tonbridge, Kent.**



I HAVE recently begun to play **Daley Thompson's Decathlon** day two, and I have reached some high scores in each event. I have run the 110 metres hurdles in 9.36 seconds, jumped the pole vault at a height of 5.05 metres, thrown the discus 75.92 metres, hurled the javelin 136.11 metres and run the 1500 metres in 235.32 seconds. My best score on day two is 874 184.

**Robert Dunning,**
**Middlesbrough.**



I AM writing to let you know my highest scores in **Daley Thompson's Decathlon.**

| | |
|---|---|
| 100m | 8.48 |
| l. jump | 11.76 |
| s. putt | 33.16 |
| h. jump | 2.45 |
| 400m | 27.12 |
| 110m | 9.45 |
| p. vault | 5.05 |
| discus | 75.90 |
| javelin | 126.70 |
| 1500m | 252.76 |

The trick with all the running except the 1500 metres, and with the shot putt, long jump and javelin is to get the speed graph into the top, purple segment. If you can achieve this when jumping or throwing it dramatically improves the distance.

**A Carter,**
**Stevenage, Herts.**

**● Thanks to everyone who has sent in their scores so far. Can anyone beat those printed above?**

## Making the dumb speak

IN THE days of the ZX-80 a number of programs appeared which claimed to produce sound on it, however none ever did.

It was therefore with much apprehension that I viewed Paddy Moindrot's program in your March issue that claimed to produce sound on the ZX-81.

I was spurred to enter it when I left the TV sound on and typed NEW. This produced two bleeps, so my hopes were slightly raised.

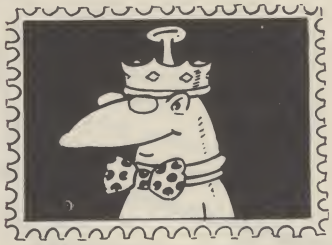
However, when I entered and tried Paddy's program, I could not believe it, my dumb ZX-81 was actually producing sound! Paddy is to be congratulated for his effort in producing such a brill program.

**M J Davies,**
**Llandeilo, Dyfed.**

## Set your lords right

THANK YOU for the excellent **Lords of Midnight** map in the March 1985 issue. However, some of the army strengths given for the Lords are incorrect, as follows: Ithrorn begins the game with 700 guards, 1200 warriors and 1000 riders. Athoril should have been allocated 150 guards and 300 warriors. Herath has 300 guards, 600 warriors and 500 riders. Mitharg was shown as having 250 guards but he actually starts with 150. Morning begins with 200 guards, 800 warriors and 300 riders. Korinel begins with 1000 warriors and Brith has 150 guards, as stated, together with 300 warriors and 500 riders.

**M Grey,**
**Newcastle on Tyne.**



I AM GLAD to say that I have finished the game **Lords of Midnight** thanks to the map printed in the March edition of *Sinclair Programs*. The map was very useful and meant that I was able to locate the lords very easily. I found Fawkrin the Skulkrin and he and Morkin went to the Tower of Doom. Morkin took the Ice Crown and gave it to Fawkrin, who destroyed it.

At the end of the game it says: "The Ice Crown has been destroyed, victory went to the free." Nothing very spectacular about the ending but it is a good game and I recommend it.

**Craig Howe,**
**Huddersfield.**

## Fastest so far

I AM WRITING to tell you that I have completed **Monty is Innocent** in a time of one minute fifty-five seconds. Can anyone beat this time?

**Michael Guy,**
**Chorley, Lancs.**

Please complete this form and enclose it with any program which you send to us for possible publication.

To: Sinclair Programs, Priory Court, 30–32 Farringdon Lane, London EC1R 3AU.

I enclose.....Program(s) for the .....computer.

I guarantee that each program submitted is my original work.

Signed .....

# LETTERS

Send your thoughts to us at Letters, Sinclair Programs, Priory Court, 30–32 Farringdon Lane, London EC1R 3AU. We pay £2 for every letter published.

HOW DO you reach key five on screen one of **Booty?**

Whatever happens, do not wait but keep moving. Firstly turn off the sound because the game will then move faster. Take key four and open key four but do not take the booty. Take key seven and go straight to door seven, not forgetting the booby trapped booty in front of it. At this point the pirate should be turning his back to the door. Open the door and take the gun.

When you go back up the ladder you should take key two automatically. Open door two. Go for key six as soon as door two is open. Go up to door six and wait for the pirate to turn his back. Get key one and go straight to door one. You are nearly home free IF you have not paused at any stage.

Finally, take key eight, go to the bottom and open door eight. If you have done everything right the pirate should be going in the opposite direction. Instead of getting out of the way, wait on the ladder. As soon as the pirate on the bottom goes past, go down, take key five and go back up.

I would take key five before taking any booty to avoid the possibility of being blown up. My highest score on Booty is 88.

**Victor Bell,**
**Clifton, York.**

## Support from ZX-81 owners

I, LIKE many other ZX-81 owners, I am sure, think that your magazine is the best on the market. It, like no other magazine I have seen, gives program listings for the ZX-81. Added to that is the fact that a lot of the programs are very good indeed and are well worth spending the time to type out.

**I Sinclair,**
**St Ives, Cornwall.**

## Help with the high jump

AFTER reading Chris Buxton's letter about **Daley Thompson's Decathlon** I noticed that people were having problems with the high jump. I therefore trotted down to our local computer shop and purchased a copy. After days and days of trying I finally succeeded.

I found out that you have to run up to the high jump and, when you are about half way Daley's width away from the obstacle, you press jump quickly and let go. When he is nearly at his full height you press jump again and this time keep your finger on the button until you land.

I have also found that in the 100 and 400 metres you can go faster by rolling a ping pong ball across the left and right keys as long as they are next to each other.

**Darren Kemp,**
**Leeds, Yorkshire.**

## Vast fortune accumulated

I HAVE completed Gil Ben-Horing's top score of 36,279,714 on **Cash Accumulator.** On my third attempt I managed to score 64,704,216.

I could have scored more, but my brother pulled out the plug!

**Simon Graves,**
**Devizes, Wiltshire.**

## Help!

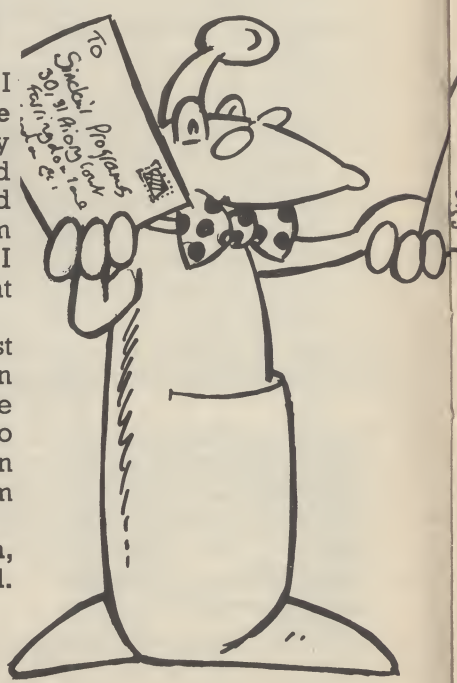
**QS Defenda,** produced for the ZX-81 by Quicksilva contains a 32 line by 31 character display. Does anyone know how they achieve this effect? **D Greenwood.**

## Heroic Jill is top knight

ON MARCH 31st, 1985 I finished **Knight Lore** from Ultimate in thirty five minutes. I gained 66% in 32 days and had to collect 14 objects from various places. For this I received the comment Hero.

On dropping the last object into the cauldron the blocks around the cauldron turned into magic spells which then engulfed me and a poem appeared on screen.

**Jill Oughton,**
**Milford Haven, Dyfed.**



## Help!

I can see a tower and palace beyond the northern icy wastes in **Doomdark's Revenge.** How can I get there? Where is Morkin? **Anon.**

## Black belt Level seven

I HAVE successfully completed **Kung Fu** for the 48K Spectrum. I reached black belt level seven and finished with a score of 455. On my second attempt I finished with a score of 524.

I have discovered that if you leave the demonstration running, the program will crash.

I think this is a great program, with the best animation I have seen.

**Simon Pritchard,**
**Belper, Derbyshire.**

I AM WRITING to compliment you on what I think is the best computer magazine on sale. I buy *Sinclair Programs*

**Help!** Has anyone solved **Inca Curse?** I cannot extinguish the fire in the fire room, remove the panels in the panelled room or go down in the sand dungeon. **David Johnson.**

every month, and cannot wait to type in some programs. I bought the February issue and became very good at the game **Byteman.** I have scored 99 076 and should like to hear from anyone who can beat me.

**G Stocks,**
**Scunthorpe.**

## Bruce Lee: beat that

I HAVE finished **Bruce Lee** by US Gold. On Saturday March 23rd I completed the game twice and scored 123,900.

My friend and I have also completed **Beach Head** with 100,100 points.

I have a tip for those people playing **Death Star Interceptor.** On the second screen on level one, move your fighter to the bottom right hand side of the screen, this place is quite safe as you are not attacked so much there.

**Barrie Williams,**
**Rickmansworth, Herts.**

## Betwixt and very between

DID YOU know that there was an issue 2½ Spectrum? On buying a new Spectrum a couple of months ago I was determined to discover whether I had an issue two or an issue three.

After looking at the edge connector I found that I did not have an issue one. I also saw that the heat sink ran across the top, and not down the side of the edge connector, suggesting that I had an issue three.

However, when I typed all the PRINT IN numbers I always received the response 255, indicating an issue two.

Finally I was so frustrated that I opened it up. There it was, stamped in white letters ISSUE THREE.

So, I have the heatsink of an issue three, the edge connector of an issue two or three, the PCB of an issue three but the ULA of an issue one or two, making my Spectrum an issue two and a half. Weird.

**P Roberts,**
**Yeovil, Somerset.**

## More power to your ZX-81

WHY IS there no ZX Microdrive compatible with the ZX-81? Is it because there would be nowhere to put the Ram Pack, or is it because the ZX-81 is not as powerful a machine as the Spectrum?

Why do Sinclair not bring out a new ZX-81 with QL style keyboard, built in 16K memory and a ZX-81 compatible microdrive included in the price? If Sinclair were thinking about a new ZX-81 they should put it at a very competitive price.

**G Jones,**
**Swansea, Glamorgan**

**Help!** Has anyone found an infinite lives POKE for **Kokotini Wilf?** I am fed up with reaching the final level with one life left, only to be killed immediately. **Fred Mathisen.**

**Help!** Can anyone offer any hints and tips on **Gift From the Gods,** produced by Ocean? **Michael Ranford.**

## Airwolf walls demolished

IN YOUR review of **Airwolf** you stated that you had to knock the bricks out of the wall on the second stage. In fact you only have to shoot out about three layers of bricks, so that it is easy to get through the wall before it is rebuilt.

AFTER reading your review of **Airwolf** I was surprised that your reviewer could not pass the second wall without difficulty. I go onto the next screen with the laser cannon then return to the next but, when the screen has just finished scrolling, I press down and right. When you are under the wall, press down and you move on to the next screen. If you hit the square which turns blue, turn round and go back in order to shoot the square again.

**David Price,**
**Tewkesbury, Glos.**

**Help!** On the first screen of **Manic Miner** I always lose my lives by hitting the stalactites on the top ledge. How do I reach screen two? **Elizabeth Wakefield.**

On the third stage a wall is rapidly built across the entrance to the next screen. Do not try to shoot this wall. Either try to beat the wall to the entrance, which is difficult, or go straight across onto the dummy fourth screen, turn round, return to the third screen and enter the hole from this direction.

**Clive Sims,**
**Felixstowe, Suffolk.**

# NEWS

## Fault vault

A NEW service has been set up in the midst of revolt by Sinclair computer owners who have suffered long delays in having their machines serviced or repaired.

Video Vault are operating a service that includes while-u-wait and a 24 hour turnaround on any machine sent to them. They charge a standard £19.95 irrespective of fault. This service covers the ZX-81, Spectrum and Spectrum Plus.

The firm have been working in the computing field for over eight years now. They felt that they could easily outdo the poor record of Sinclair Research on machine maintenance.

Video Vault can be contacted at: 140 High Street West, Glossop, Derbyshire or by telephoning (04574) 66555.

## WINNERS

TWO competitions were held in the March 1985 issue; winners are listed below.

The first was held with Adventure International and the winners will each receive a copy of **Swordmaster.** The correct answer to final strength was 42 although we had a variety of answers ranging from 35.99997 to 371700. The winners are:

R J Law, Cameron MaClean, A G Coersqi, Ed Mansell, Peter West, C Hampton, Lee Anthony Frost, Darren Woodberry, Darren Williams, Andrew Atkins, Nicola Walker, Garry Flowers, Vincent Hill, Kevin Heasman, Mark Cannon, C S Martin, J Fitzpatrick, Colin J Smith, Stuart Hollins Gareth Smith, Mark Dixon, David Foster, Craig Charlton, Andrew Brogden, C Whiting, Martin Nicholson, Kevin Hill, S Baigent, Gregory Bones, Lee Davis, M Wilkinson, Jason Humphreys, B K Collier, Geoff Walton, D Voright, Amanda L Jukes, Kevin Wood, Paul Humphries, Christopher Brennan, David Cookson, B Morris, Brian Gordon, Andrew Hunt, Andrew Walker, Gemma Smith, Mike Davies, S M Hindley, A Pearce, Colum Scott, Keith Oiscombe.

The second competition was held with **Software Farm,** producer of ZX-81 software. The twenty winners will each receive its range of games. The winners are:

Brian Moss, A Beckers, David L Hamlyn, Andrew Fletcher, Shaun Palmer, Alfred Campbell, A Jackson, Martin Tubb, Ashley Strachan, Richard Hansen, David Blair, David Ross, R E Browning, R M Simmons, Ian Tomkins, Steven Wildman, Raymond Kroes, Francis Dickenson, E J Cooper, J R Houghton.

## Dambusters!

US GOLD has released two new Spectrum games for the summer, both will cost £7.95.

**BC2, Grogs Revenge** is a sequel to **B C Quest for Tires.** The game is described as an adventure with graphics. The graphics are animated cartoons and the story is set around Tor who is searching for the meaning of life. His quest takes him into many dangerous situations and you must guide him along the way.

**Dambusters** is the second release. It is based on the real life story of the famous war time exploits of 617 Squadron, who carried out raids on the German dams in 1942. It is an arcade style game using simulation techniques to show you various enemy locations. You have the option to act as pilot, navigator, front or rear gunner. Flying a Lancaster Bomber plane you must fire your bouncing bombs to destroy the dams.

Both the RAF and the 617 Squadron have approved the game.

## Make the connection

CHEETAH Marketing have developed two new joystick interfaces which are compatible with both the Spectrum and Spectrum Plus.

£11.50 will buy the basic interface, or for £12.75 the second will allow you to attach other peripherals. They are designed to work with most well known joysticks, including Sinclair, Kempston and Protek.

The interfaces are now on sale and can be bought through the usual suppliers.

# SHOULD YOU BUY THIS?

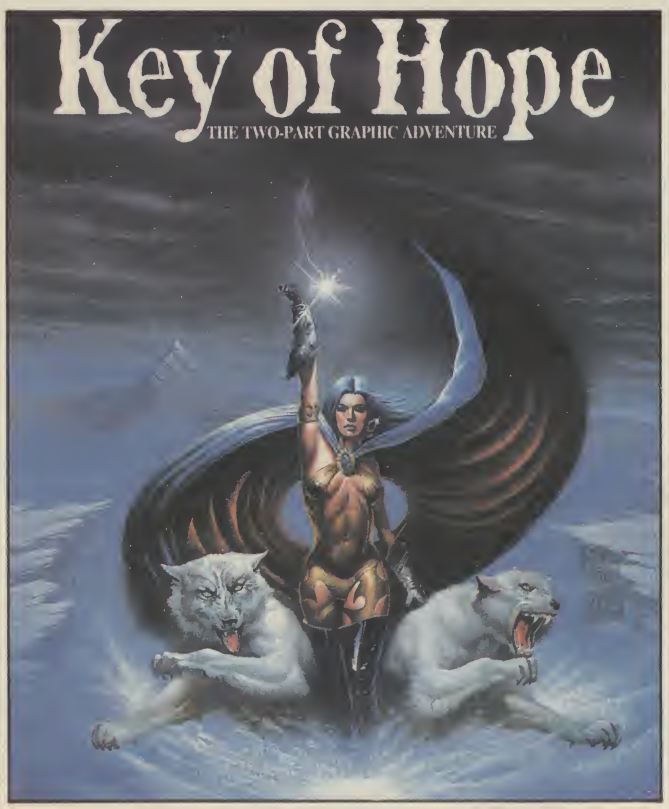
DON'T Buy This! Firebird are attempting to prove that you can be mad and stay in business.

Their new software package is called **Don't Buy This** and it is now on sale, for £2.50. "The package contains a selection of the worst Spectrum games ever published in the world" said James Leavey, marketing manager. Games included are **Fido 1, Fido 2, Weasel Willy** and **Fruit Machine.**

## Despairing? Hope arrives

GAMES Workshop's authors have devised a hint sheet to help anyone who is having difficulty completing **Tower of Despair.** For the sheet write, enclosing a SAE, to: Mail Order Dept, Games Workshop Ltd, 27/29 Sunbeam Road, London, NW10.

Meanwhile for those who have completed, or given up on the game, a sequel will be out at the end of May. **Key of Hope** continues the saga in a graphic adventure with over 400 locations. It costs £7.95 and has been written by one of that all too rare species of author, a female.



## Racing ahead

KEMPSTON, well established joystick and interface manufacturer, has decided to launch a range of software which is being developed by Orpheus Software.

**Kempston Micro Racing** will be launched shortly. It is a Formula Ford Racing simulation and features include a car on the race track with side mirrors to watch out for opponents following behind.

Orpheus have been producing software for some time, but this is the first for the Spectrum. Ab Pandaal, managing director of Kempston said "Although relatively new, they impressed me with their professionalism and close attention to detail."

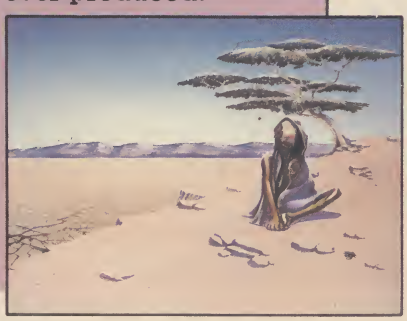
Plans are afoot for more games which will be released throughout the year. Micro racing will be available through the normal outlets and will carry the Kempston logo.

## Soft Aid sales still soaring

OVER £150,000 was raised, in only seven weeks, by the Soft Aid appeal.

All this money will be used to bring relief to the starving people of Ethiopia.

The tape costs just £3.99 and 60% of the profits are being sent directly to the charity. You can buy a copy from any major computer store in the country. The tape contains twelve of the best Spectrum games ever produced.



# Careful!

Sinclair User is giving away a FREE 24-page booklet on the front of the June issue. It's crammed with information, prices, features, suppliers and star ratings of all the available Spectrum and QL add-ons. So you'll never again buy an overpriced joystick or non-compatible printer.

Plus there is an exclusive review of the 'Fourth Protocol' a revolutionary new game based on Frederick Forsyth's latest novel.

Not to be missed. On sale May 18th.

**SINCLAIR USER is at all good newsagents price 95p.**

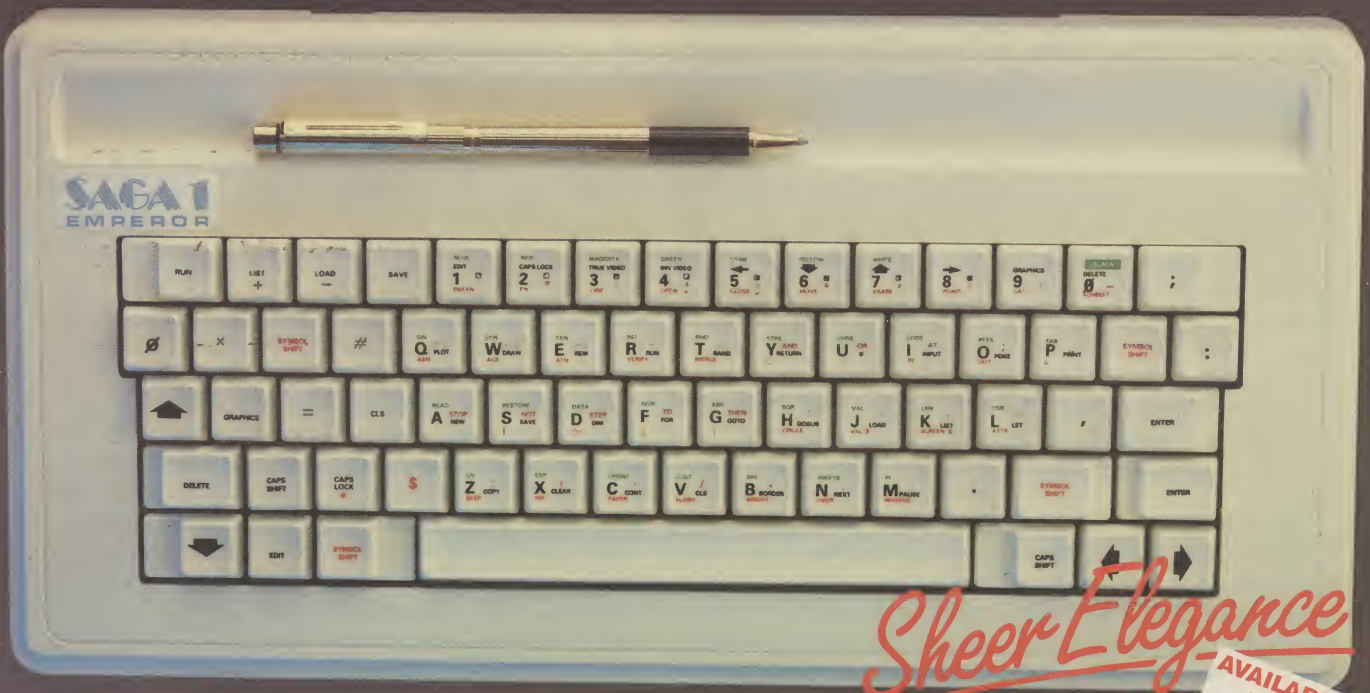
# SAGA 1 EMPEROR



*Sheer Elegance*

AVAILABLE NOW

## THE KEYBOARD FOR ZX SPECTRUM COMPUTERS

- **EASY FITTING**
- **PLEASURE TO USE**
- **LONG LASTING**

The Saga 1 Emperor, equipped with 67 keys, is a carefully designed replacement keyboard incorporating many special functions for the popular Spectrum Computer. For business or pleasure, the Emperor will make your computing time more productive and enjoyable. The SAGA 1 Emperor will enable you to use the Spectrum as a powerful programming tool easier and faster.

The style is easy:- for your benefit, the SAGA 1 Emperor has been designed to ensure that available Spectrum Peripherals will fit in the usual manner.

The assembly of the keyboard is simple — and fast. No soldering required, so that within just 5 minutes you can replace your current ZX Spectrum with the new SAGA 1 Emperor.

AND ALL THIS FOR JUST £54.95 (inc. VAT)

**SAGA P.C.!**
Your very own Personal Carrier, partitioned to neatly accommodate your Spectrum, Saga 1 Emperor and peripherals; Tape Recorder, Power Supply, Cables, manuals and cassettes. Of solid and attractive construction the P.C. is ideal for storing and transporting your computer accessories. The case uses a strong double stitched and bound Black Calf Vinyl with a tough thick ABS inner compartment, leather buckles and a strong handle. Only **£26.95** (inc. VAT).

**DUSTCOVER**
Another top quality product, this expertly produced long-lasting bound and sewn dustcover has been specifically designed for the SAGA 1 Emperor, which will keep everything looking neat and dust free. Only **£4.95** (inc. VAT).

**SOUNDBOOST**
Hear that keyboard click with a SAGA SOUNDBOOST
The SAGA SOUNDBOOST is a tiny electronic circuit which considerably enhances the sound volume and quality of the Spectrum sound output. Adjustable from a whisper to a roar, the SOUNDBOOST provides added realism and excitement for games players and security for programmers (Hear that Keyboard Click!). No cutting, no soldering — just connect.
Only **£9.50** (inc VAT).

**FLEXICABLE**
Developed to relieve your Spectrum from the pressure of life, to fit your Spectrum and your add-ons taking the load with ease. By popular demand we now have two versions of the 9 inch FLEXICABLE available to suit your needs.
**Male-Female FLEXICABLE — £12.45**
**Female-Female FLEXICABLE — £9.50**
**Convertor PCB — £2.95**

## THE COLLECTION

The latest addition to our product range is The Collection, providing you with three money saving action packed specials containing quality products — an ideal gift.

**COLLECTION 1 — SAVE £10.00!!**
r.r.p **£53.85**
Our special price **£43.85**
includes: Saga Personal Carrier **£26.95**
Soundboost **£9.50**
Dustcover **£4.95**
Flexicable (M-F) **£12.45**

**COLLECTION 2 — SAVE £20.00!!**
r.r.p **£108.80**
Our special price **£88.80**
Collection 1 **£53.85**
Saga 1 Emperor **£54.95**

**COLLECTION 3 — SAVE £30.00!!**
r.r.p **£238.75**
Our special price **£208.75**
Collection 2 **£108.80**
48K Sinclair ZX Spectrum **£129.95**

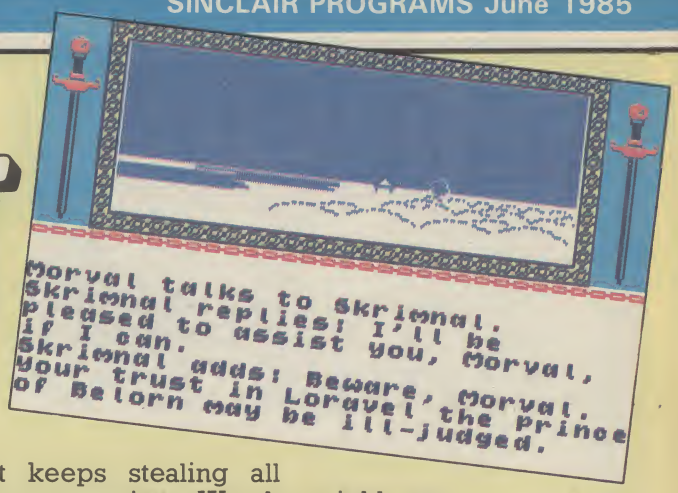
# AFTER MIDNIGHT

## RUNESTONE



GAMES Workshop kept surprisingly quiet about their graphic adventure, **Runestone.** Surprisingly quiet in view of the fact that it is an excellent game, a direct successor of such classics as **The Hobbit** and **The Lords of Midnight.**

To start with, it contains 2000 locations, from each of which you can look in four different directions. Your view of the countryside is strongly reminiscent of Lords of Midnight. Detailed pictures, on the basis of which you can make your next move, appear quickly and smoothly.

Where the game goes beyond the Lords of Midnight is in its text input. Commands can be input as they would be in a normal adventure, and you are able to converse to a limited extent with the forty other characters in the game.

There are a variety of characters in the game, all of whom have different attributes and personalities. It is possible to change your own personality from that of Morval the warrior to that of Eliador the elf or Graymarel the wizard. Another character who will turn up sooner or later is the unwelcome Skrimnal the Sly. Skrimnal seems very friendly, offers help and advice, but keeps stealing all your possessions. Watch out whenever he looks too happy.

Runestone incorporates a number of different quests. You can aim to collect the stolen treasures of Belorn, defeat the orcs and denizens of the northern wastes or destroy the fearsome Kordomir the dark. Movements are made in real time, so if you wish to embark on a quest it is important to start immediately and not leave your enemies time to assemble their forces while you wander around and chat to your neighbours.

Movement is made more difficult by the great lakes and river which separate different parts of the country from each other. Enthusiastic and heroic though Morval is he is unable to swim, and there are only two ships to be found on his side of the water.

Runestone is an excellent game produced for the 48K Spectrum by Games Workshop, 27/29 Sunbeam Road, London.

**Game type: Adventure**
**Price: £7.95**
**Rating: 85%**

## CHAOS

ON A FIRST run through, **Chaos** certainly lives up to its name. You play the part of a wizard aiming to defeat all other wizards on the board. There can be up to eight wizards on screen at a time, each of which can be human or computer controlled. Eight wizards firing spells at each other on a Spectrum screen; chaos indeed!

The game is set in the Dungeons and Dragons mould. Each wizard is assigned a variety of spells from a long list. Some are offensive, such as Giant Rat or Golden Dragon and some, such as Magic Armour, are defensive.

Most spells are not guaranteed to work. Success will depend partly on chance, and partly on whether your spell would disturb the balance of the universe. Of course, you could always go one step further and change the nature of the universe yourself . . .

The screen display is not as impressive as the phrase "Continuously animated sprite graphics" suggests but then, as this is primarily a strategy game, and most characters spend most of their time standing still, this is no problem.

A good introduction to the realms of fantasy for novices, and fun for experienced role games players as well, Chaos is produced by Games Workshop, 27-29 Sunbeam Road, London.

**Game type: Strategy**
**Price: £7.95**
**Rating: 66%**

## DUKES OF HAZZARD

IN ORDER to win £5,000 and save the General Lee, the **Dukes of Hazzard** must reach the start of the Hazzard County Road Race in safety. All that is necessary is to avoid Boss Hogg and the entire Hazzard County police force.

You drive the General Lee from left to right across the screen, with the police chasing you in their car, flying above you in their helicopter and various obstacles approaching you from the other direction.

To increase speed it is necessary to push one key as many times as possible. This wears out your fingers and, presumably, your keyboard, very quickly without adding any touch of how it really feels to drive a car. You can also leap oncoming objects, change lanes on two lane sections of the road, and throw dynamite at any nearby obstruction.

Nothing very spectacular about the storyline, graphics or the game itself.

Dukes of Hazzard is produced for the 48K Spectrum by Elite, 55 Bradford Street, Walsall.

**Game type: Arcade**
**Price: £6.95**
**Rating: 37%**

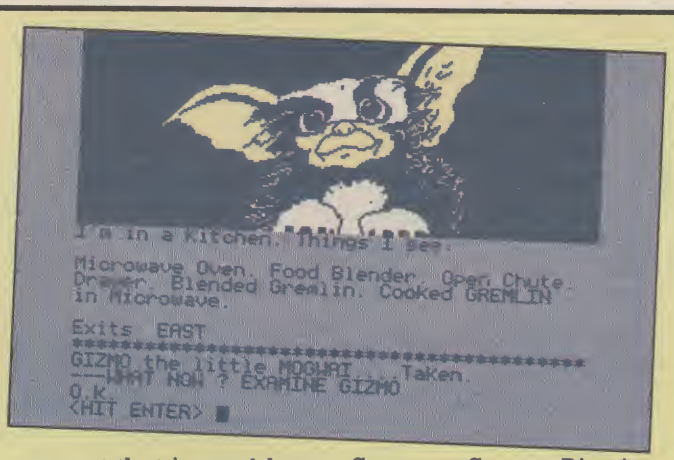
## GREMLINS

LOAD IN this game and what do you get? **Gremlins** all over the house, that is what you get. For starters, the first thing you see in this adventure is a gremlin throwing a dart at you. This involves some quick thinking; discretion is, after all, the better part of valour.

Down in the living room is a gremlin, and the action starts to hot up, for it will not let you pass. The kitchen seems to be stuffed with the little creatures. Remember the liquidised gremlin in the film? Here is your chance to see a gremlin liquidated on your Spectrum screen in full colour animation.

There is a lot in this game. Good pictures, quickly drawn, which change depending on your actions, a series of puzzles to keep you racking your brains, a strong storyline, and a close attention to the film.

Gremlins is an enjoyable adventure, although the early puzzles suggest that it would not keep an experienced adventure player stumped for long.



Produced for the 48K Spectrum by Adventure International, 85 New Summer Street, Birmingham.

**Game type: Adventure**
**Price: £9.95**
**Rating: 74%**

## WORLD SERIES BASEBALL

THE CHEER leaders parade across the ground, the last advertisement scrolls across the giant video screen and the players run onto the pitch to start another thrilling game of **World Series Baseball.**

Imagine, the headline making company of yesteryear are back, or at least, their logo is back, with a vengeance. World Series Baseball looks good, plays well and is very challenging.

The program manages to produce a simulation of baseball by showing the pitch on screen, and highlighting essential sections on a screen at the back of the pitch. Batting and bowling are highlighted, while fielding and base stealing are all done on the pitch.

It is not necessary to know anything about baseball to play the game, but some knowledge, either of baseball or of rounders, comes in very useful. Of course, baseball sounds smarter than rounders, but the games are very similar.

All the difficulties of the real game are there: failing to hit the ball three times in a row, running for a base and finding a fielder has beaten you to it, missing a catch, throwing a ball in a wildly inaccurate way ... you name it, it is in there.

World Series Baseball is produced by Imagine (1984), 6 Central Street, Manchester M2.

**Game type: Simulation**
**Price: £6.95**
**Rating: 69%**

## A DAY IN THE LIFE

SOME celebrities have their lifestyle celebrated on television, some describe their daily routine in the glossy colour supplements. It seems only fair that Sir Clive should have his life examined in **A Day in the Life,** a Spectrum arcade game.

Life as computer guru seems not to be as straight forward as you would imagine. For one thing, Clive appears to have mislaid most of himself, although his head rolls merrily on regardless. As the game progresses he loses some of his more vital characteristics, not to mention a great deal of lives. Still, what can you expect, venturing into London at a level even lower than that of a C5?

The game claims to detail a day in Clive's life as he makes his way to Buck House to receive the award of Dame Commander of the British Empire. To do this successfully he must cross various screens: the bank, the station, the street etc until he stands at the foot of the throne.

The puzzles are difficult, requiring split second timing and quick reactions. A Day in the Life is produced for the 48K Spectrum by Micromega, 230 Lavender Hill, London.

**Game type: Arcade**
**Price: £6.95**
**Rating: 54%**

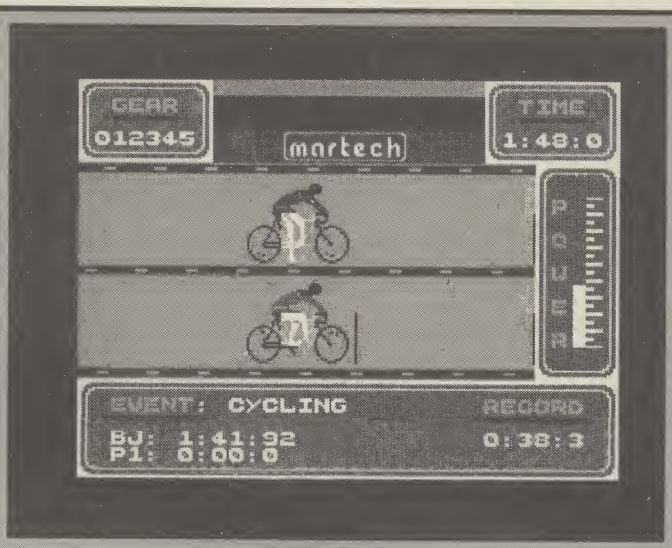
## BRIAN JACKS CHALLENGE



COULD you make it as a sporting superstar? **Brian Jacks Superstar Challenge** gives you a chance to work out whether you could or, whether your index finger could.

Ocean really do have a lot to answer for. Not only have they given everyone the idea that sports simulations are a really good idea, they have also given us the joystick-bustin' movement which leaves all players without joysticks with fingers twitching spasmodically after a long session on the computer.

It did seem that almost every sport had been simulated on the computer but, to give Martech their due, they have had some original ideas. Arm dips and squat thrusts on the computer?

You compete against Brian Jacks or, at least, an animated figure in eight sports at a variety of different skill levels. Some of these sports require fast movement of the joystick or of two fingers, but others are more complex. Arm dips, for example require you to move the joystick as you go up, press the fire button to change direction, move the joystick as you go down, press the button again. It is a difficult routine to master and seeing Brian, out of the corner of your eye, doing perfect arm dips every time is no help.

A little more difficult than most sports simulations, Superstar Challenge is produced for the 48K Spectrum by Martech, Martech House, Bay Terrace, Pevensey Bay, Sussex.

**Game type: Sports simulation**
**Price: £7.95**
**Rating: 64%**

## MOON CRESTA

NOWADAYS it is not often you come across aliens and spaceships in a computer game. **Moon Cresta,** the official Spectrum version of the arcade game takes us back to the good old days of computer programming. Trouble is, so near to the time, they still look like the bad old days and alien zapping is not calculated to raise feelings of nostalgia.

Your space ship moves from left to right at the bottom of the screen. Aliens move in all directions on a wrap-round screen, which allows them to corner you, or suddenly emerge Jaws-like, from below.

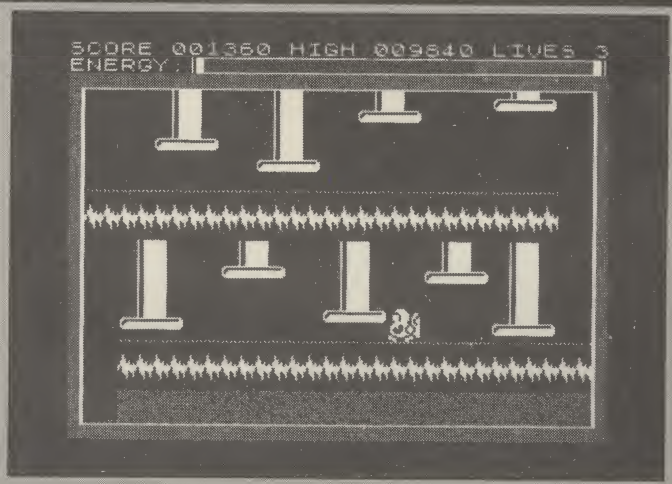
Aliens come in a variety of different colours and different sizes but not in very large attack waves, and they do not shoot you they only kill on contact. Attack waves come in cycles, and there is not a wide range of alien types.

The main difficulty with the game is the lack of continuous fire option. Every time you wish to shoot you must press the fire button, whether you are using joystick or keyboard. Aliens which would not defeat you through strategy or speed, finally win through as your index finger gives way.

There are faster shoot 'em ups on the market, there are more graphically attractive shoot 'em ups on the market, there are better shoot 'em ups on the market. Moon Cresta is produced for the 48K Spectrum by Incentive Software, 54 London Street, Reading.

**Game type: Arcade**
**Price: £7.95**
**Rating: 38%**

## BUG EYES



PRECISE movements and timing are essential elements in **Bug Eyes.**

The storyline of Bug Eyes is simple. The aliens are committed to destruction of all intelligent life in the universe, starting with the earth. Your aim is to stop them by crossing all ten levels of their space ship and switching it off. This you do, not by shooting, zapping and jumping, but by walking left and right around obstacles.

With only two controls the challenge is to work out the correct timing on each screen. Moving platforms, lifts and bouncing aliens are the main problems to be faced, and it is often essential to pass several obstacles without pausing.

The graphics are clear and flicker free, but there is little variety to be found in the theme of aliens and spaceships, however liberally you interpret those subjects.

Bug Eyes is produced for the 48K Spectrum by Icon Software, 65 High Street, Gosforth, Tyne and Wear.

**Game type: Arcade**
**Price: £6.95**
**Rating: 35%**

# Nice Password.
# Shame about the Identity.

It's a unique combination.

Your Special Identity Number and Personal Password. The valuable key to huge databases teeming with activity, set on our Mainframes across the nation.

On Micronet 800, you're a valued individual, adding your own special flavour and personality to the database.

Take our exciting new "Gallery"- You control your personal screens for all to see. The intriguing "Chatline" public conversation service gives you freedom to express your views and meet some remarkable people.

All part of a tremendous Communications section that networks you to 50,000 Micronet and Prestel users across the country. Try Teleshopping, or interview celebrities live on "Celebrity Chatline" every Wednesday night.

And there's FREE (& instant) National Electronic Mail, plus International Telex, and the Contact and SwapShop bulletin boards.

Get computer news first on Micronet's daily (and controversial) "Newsflashes" and read up on the latest reviews and courses. Feast from our regularly changing menu of programs to download straight into your micro - absolutely free.

You also get access to Educational Computing's "School Link" and Prestel's huge 300,000 page database, including world news, business & share bulletins and optional homebanking. For only £16.50 per quarter, that's less than the price of a daily paper!

Micronet is unique amongst networks and bulletin boards as it keeps your phone costs very low with special local* rate calls whenever you connect up – that's around 40p for a whole hours entertainment each evening.

The only accessory you need is a Modem, to get the best value for money around in micro communications.

Fill in the coupon for the full facts and send to Micronet 800, 8 Herbal Hill, London EC1R 5EJ. But be warned, Micronet 800 is a 'living' service with ever-expanding features. So maybe you'd be better to call in at your local Micronet 800 Action Station. There are thousands of Micronetters waiting to meet you!

To: MICRONET 800, Durrant House, 8 Herbal Hill, London EC1R 5EJ. Telephone 01-278 3143.
Please send me the full facts about Micronet 800.

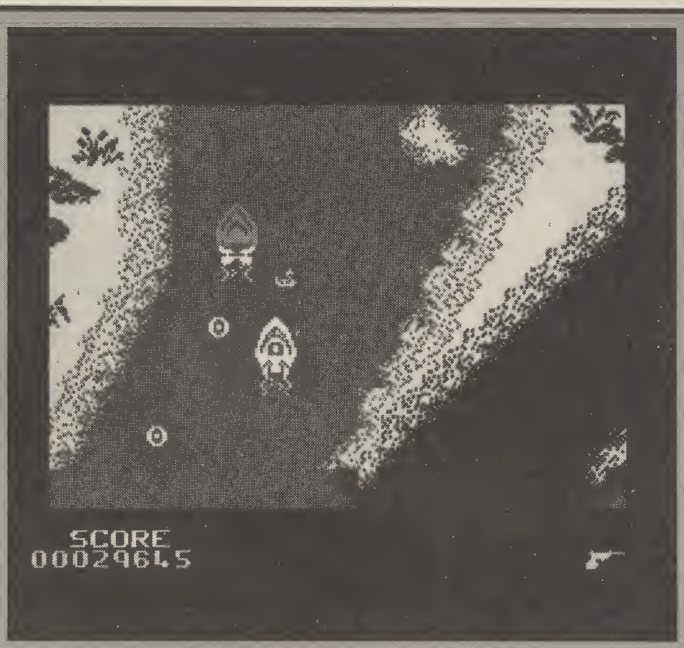
## SPY HUNTER



SPY HUNTER sets you, as a world class spy, on the road in your ultra-equipped, turbo-charged spy mobile. The road is crawling with enemy agents bent on your destruction and the law of the road is kill or be killed.

What the grandiose game description and flashy cassette cover refer to is a straightforward variation on a theme which you have seen many times before. You drive your car up the screen, along a winding road, shoot some obstacles, avoid others and try to push others off the road.

There are several nice touches. To pick up weapons you must allow the weapons van to overtake you and then drive on board while it is still moving. The road takes you on several diversions, round unsatisfactory bridges and through water.

When all the variations are taken into account, this is still not a game which could be described as being state-of-the-art or even the best of its kind. It is fast moving, it does give scope for great improvements in performance but if you like arcade games you could do much, much better.

Spy Hunter is produced of the 48K Spectrum by US Gold Ltd, Unit 10. Parkway Ind. Centre, Birmingham B7.

**Game type: Arcade**
**Price: £7.95**
**Rating: 36%**

## WRIGGLER

THREE, two, one: and they are off, in the annual Maggot Marathon. The other worms wriggle quickly away as you, **Wriggler,** hero of the game, consider your strategy.

Starting on the maze before you you meet a wandering ant. Ants can be lethal, but this one keeps out of your way. Round the corner, and you find a welcome cup of coffee waiting for you. Do not relax for too long, though. One touch from an ant could leave you with your whole body crumbling gruesomely to pieces and one fewer life.

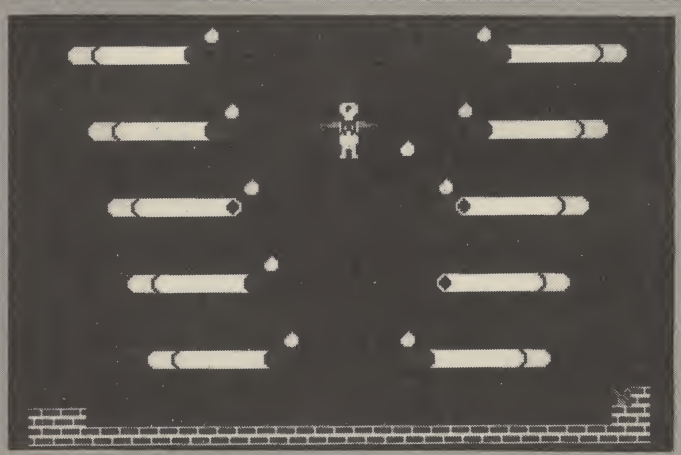
The pace of the game is a little slow moving, especially on deserted screens. On those with enemies approaching or chasing you, things seem to move far too quickly. Enemies are gruesomely animated, especially the long legged spiders. All those eight legs, all moving at once, yeeuch.

Once out of the maze like garden you are far from home and dry. You must then wander through the scrubland, through the underground, avoid going through hell, wander through the mansion and escape.

Wriggler verges on being an adventure as it involves collecting and using objects as well as sorting out a maze and avoiding nasties.

Original and cute, Wriggler is produced for the 48K Spectrum by Romantic Robot, 77 Dyne Road, London NW6.

**Game type: Arcade adventure**
**Price: £5.95**
**Rating: 58%**



## NICOTINE NIGHTMARE

SAVE THE world from the Evil Weed! Your aim in **Nicotine Nightmare** is to stamp out all cigarettes by bringing an entire cigarette factory grinding to a standstill.

The game begins with smouldering cigarettes on screen. You must douse six to escape before any one of the cigarettes burn out. This short sequence is supposed to test your commitment to stamping out smoking. What it in fact tests is your patience, as cigarettes appear to light spontaneously and some refuse to be doused.

The main body of the game takes you through the factory which is built in a style reminiscent of **Manic Miner.** Accurate movement is difficult although, in many cases, the game requires absolute accuracy.

Frustrating rather than fun, Nicotine Nightmare is produced for the 48K Spectrum by Atlantis Software, 19 Prebend Street, London N1.

**Game type: Arcade**
**Price: £2.99**
**Rating: 34%**

# POTTY POSTIE

**Guide Pete the Potty Postie around Leany Lane in order to post all his letters, achieve a high score and keep his job. Avoid the aliens, the nasties, the man eating stereos . . .**

**Written for the Spectrum or Spectrum Plus by Mike McAulay of Kingswood, Bristol.**

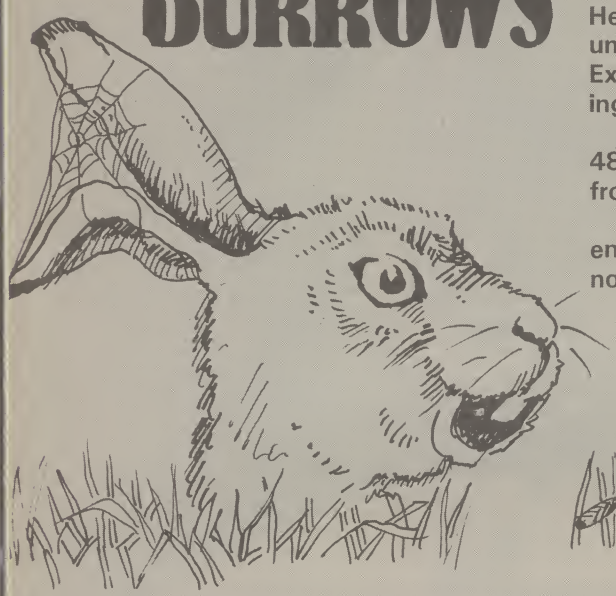
As top parachutist in the famous Red Devils parachute team you must make as many successful jumps as possible from your aeroplane. As your team is so famous it is a point of honour that you not only make a successful landing, but that you land exactly on the landing square every time. Move to left and right using keys P and Q.

Red Devils was written for the Spectrum or Spectrum Plus by Richard Simpson of Kidlington, Oxfordshire. Underlined characters are those to be entered in graphics mode.

# BURROWS



**The rabbit is digging a burrow, but the spiders are after him. He can kill them by luring them under the boulders in the ground. Extra points can be gained by picking up diamonds.**

**Burrows has been written for the 48K Spectrum by T. Sherwood from West Bromwich.**

**Underlined characters are to be entered in graphics mode. Please note that we have not been able to convert some of the program on our printer; the changes are as follows:**

**Line 7059 the four sections between quotation marks. A space is shown between each mark, each of which should be replaced by one ig5.**

**Line 7056. The last section shows 32 spaces, these should be changed to 32 × ig3.**

# You've got it Licked

THE FOUR objects to be collected in **The Alchemist** are the lamp, the lead bar, the vase and the ring. Place these objects in the chest and pick up each piece of scroll immediately it appears. When you have all four pieces of scroll go to the Warlock's room and press D.

**C Smith,**
**Armadale, West Lothian.**

TO SOLVE **The Alchemist** it is necessary to turn the lead to gold. To reach the spell performing this function, as well as the lantern, the key must be used on the locked door.

**Ian Morris,**
**Crawley, Sussex.**

VARIOUS BUGS in **Daley Thompson's Decathlon** make it possible to accumulate high scores. On the high jump, wait until you reach 2.47 metres and then jump under the bar. On the 400 and 1500m, wait until the clock reaches 1000secs — your average record time, and then start running. The clock will return to zero and you will be given a huge score.

On the long jump, jump just past the beginning of the pit. This will give you a score of over 247m.

**S Bourne,**
**Whitsable, Kent.**

GETTING nowhere with **Pyjamarama?** Start by taking the bucket to the bathroom, and waiting until it is full. Then go to the plant room and exchange the bucket for the fuel can. Fill the fuel can, collect the £1 coin, swap it for the 1p, go to the toilet, collect the hammer, exchange the hammer for the — **Hang on, this is getting too easy. Just stop there. Ed.**

**S Bourne,**
**Whitstable, Kent.**

GAIN INFINITE lives on **Lunar Jetman.** Load the program with MERGE "", and stop the tape when OK appears. Then enter POKE 23755,10. Edit the line, by moving the cursor until it reaches the PRINT USR statement. Just before that add POKE 36965,0 then RUN the program and press play on your cassette recorder.

**Marcus Wu,**
**Sparkbrook, Birmingham.**

BRIGHTEN UP your loading screens and title pages on the Spectrum and Spectrum Plus with this short routine:

```
10 PLOT 72,94
20 PLOT 100,100
30 DRAW 7, 20, 20000
```

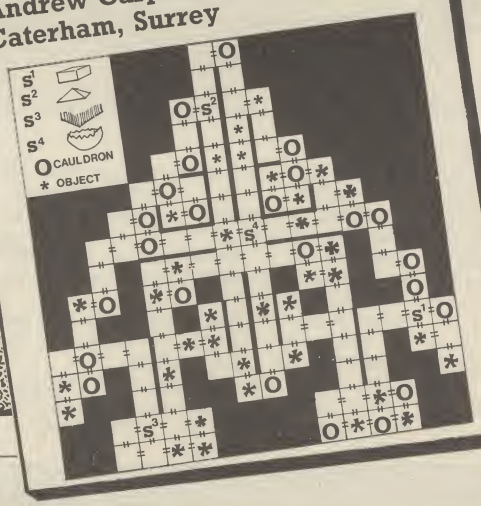
**Timothy Sneath,**
**Cambridge.**

INFINITE lives are always useful in **Manic Miner.** Acquire them by adding 25 POKE 35136,0 to the loader program.

**Michael Rimmer,**
**Manama, Bahrain.**

**ALIEN 8 MAP**

**Andrew Carpenter,**
**Caterham, Surrey**



SEARCHING for a cassette recorder compatible with the ZX-81 can be like looking for a needle in a haystack. The **Teleton TCR 400** radio/cassette recorder is the perfect solution. Load and Save leads can be left in place without problems and the LED indicator shows you exactly what is happening.

Even better is the motor speed control, which allows you to SAVE a program at normal speed and then LOAD it in at the fastest speed, thus speeding the loading procedure considerably.

**John Hammond, Heywood, Lancashire.**

WANT TO start **Ghostbusters** with £101,200 instead of £10,000? Use BEENY as your name and 30335020 as your account number in order to start out rich.

**J Browning & P Parsons, Tavistock, Devon.**

STOPPING RAM wobble on the ZX-81: a new solution. Try taking a piece of strong card at least the length of your ZX-81 and bending it 2" from the end. Place it under your ZX-81 and Ram pack and tape it firmly in position. Once this has been done the ZX-81 can be hit without it crashing.

**Darren Lovatt, Stoke on Trent, Staffs.**

# Pen-friends

**Jason Underwood, 71 Frodingham Road, Bentilee, Stoke on Trent, Staffordshire ST2 0PT** has had his Spectrum for 1½ years and also owns a joystick, professional keyboard and plenty of games. His favourite games are **Airwolf, Hunchback** and **The Hobbit.** He would like a penfriend aged between 14 and 16 with whom he can swap hints and ideas.

**Stephen Beechey, 34 St Laurence Road, Northfield, Birmingham B31 2AX** is 17 years old, and owns a wide variety of games. He would like a pen pal who is interested in playing games.

**Alan Panter, 10 Bridge Road, Dewsborough, Northants, NN14 2IF** is 10 years old and owns a 16K ZX-81. He would like to find a penfriend with whom he could exchange tips, news and programs.

**O O Ademiyi, PO Box 4616 KDJ, Kaduna, Kaduna State, Nigeria** owns a Spectrum and is finding it difficult to contact other Spectrum owners, as there are no Computer clubs in Nigeria. Interests are Spectrum programming, listings and the use of LOGO.

**Sarah Young, 40a Carnarvon Road, South Woodford, London E18** is 13 years old and owns a 48K Spectrum. She enjoys arcade and adventure games, especially **Sherlock, Pygamarama** and **Knight Lore.** She also enjoys programming occasionally.

**Matthew Kane, 147 Tandragee Road, Portadown, Co Armagh, N Ireland** has a Spectrum and over 150 original games. He enjoys typing listings into his computer, if they are long enough. He would like to find a pen-friend who also has a Spectrum.

```

Updside down, written by Andrew Seccull of Oxford for the Spectrum, is a useful little program for demonstrating to newcomers how to use some of the less frequently used commands, LEN and POINT. It will also help you to understand how each character printed on the screen is made up of dots (called pixels) on an 8×8 grid and encourage you to think of your TV screen as a grid which is 256 pixels wide by

176 pixels deep.

Upside down prints a word you input, called an echo, and develops from this an image which is either upside down or sideways. It does this by looking at each pixel of the echo and re-plotting it somewhere else for the image.

**Variables**

A variable is a name given to a location in memory used to store a number. The value of a variable may change as the program is run. There are just a few variables in Updside down:

a$ is a string variable to hold the word as entered.

a is a loop counter which counts the pixel row of the echo.

z is the y coordinate for upside-down image and x coordinate for sideways image.

n is a loop counter for counting pixels horizontally along each pixel row of the echo. It is also used as a coordinate for the image: x for upside-down and y for sideways.

**How it works**

Lines

2–3 Clear screen and print instructions.

4–6 Control subroutine (upside-down or sideways).

UPSIDE DOWN

10 Clears screen. Inputs word. Checks number of characters in word using LEN a$. Must be fewer than 30 for horizontal image.

15 Prints word echo on top line of screen.

20 Sets z=166 for first pixel row of image i.e. 9th pixel row from top. Sets a to count upward through eight pixel rows of echo.

30 Sets n to count pixel columns of echo from left to right. Note that LEN a$ * 8 gives number of pixel columns in echo.

40 Checks to see whether pixel at n,a is INK (using POINT). If it is, then a dot is PLOTted at n,z.

50 Loops back to 30 for next n. When all pixel columns of a single pixel row in echo, have been PLOTted in image, z is reduced by 1 (to PLOT on next pixel row down) and the program loops back to 20 for next row up in echo.

60 Re-starts program after a PAUSE.

SIDEWAYS

100 As lines 10–15 but checks that number of characters is fewer than 20 for vertical image.

200 Sets z=0 for first pixel column of image. Sets a to count down through pixel rows of echo.

300 Sets n to count pixel columns of echo from right to left.

400 As line 40 but dot now PLOTted at z,n.

450 As line 50. Note that this should be z=z+1 although negative numbers are taken as positive when PLOTting.

460 As line 60.

# BEGINNER

# MINI ARTIST

**Using the cursor keys you can draw horizontal and vertical shapes on your ZX-81 with this program.**

**Mini Artist has been written for the 16K ZX-81 by Keith Lancaster from Fleet.**

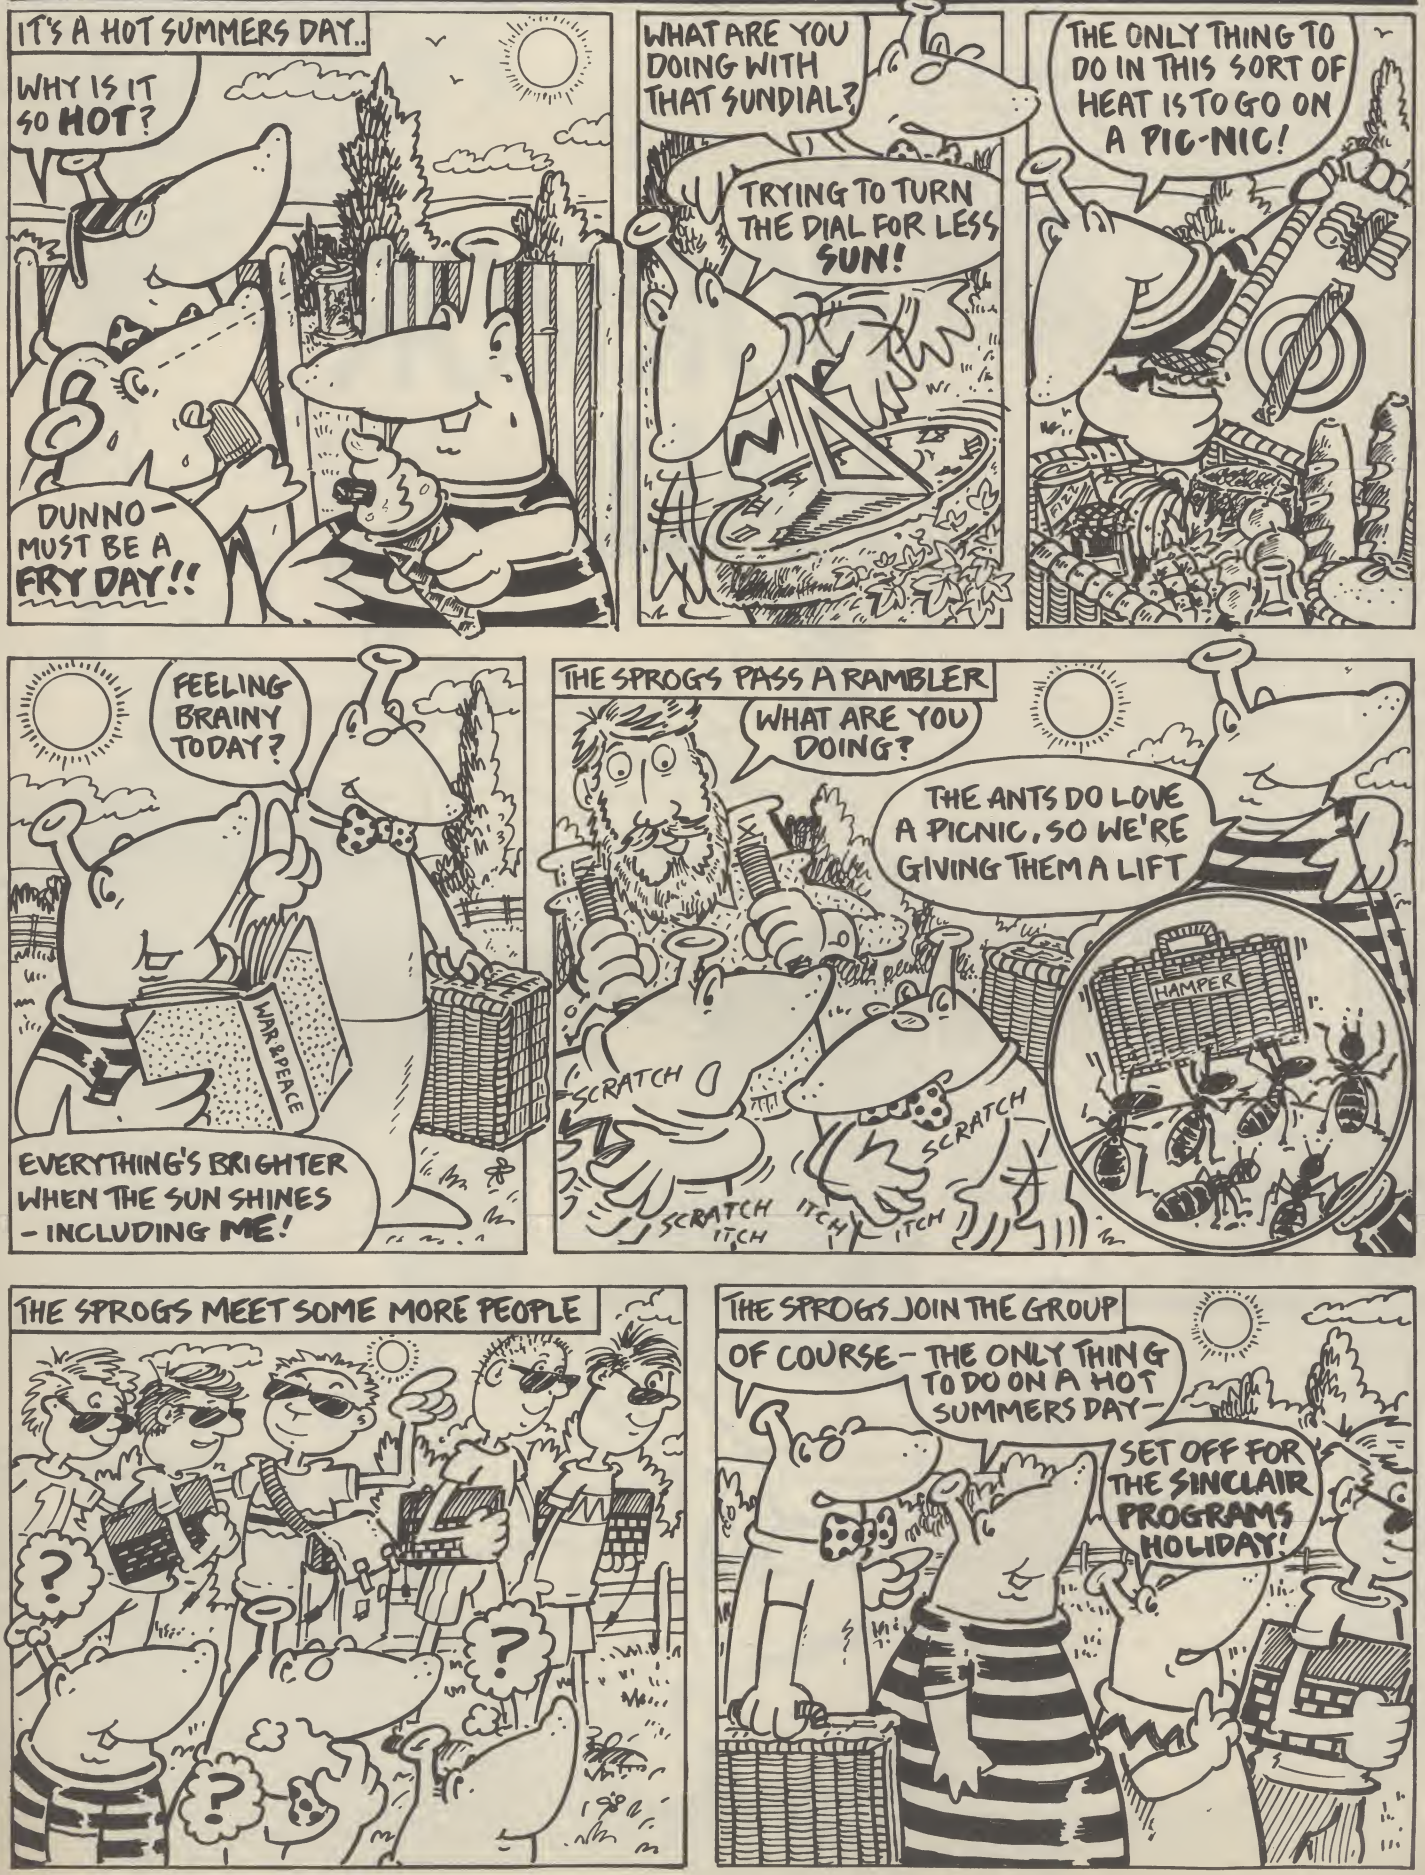
# SPROGS



IT'S A HOT SUMMERS DAY..
WHY IS IT SO HOT?
DUNNO - MUST BE A FRY DAY!!
WHAT ARE YOU DOING WITH THAT SUNDIAL?
TRYING TO TURN THE DIAL FOR LESS SUN!
THE ONLY THING TO DO IN THIS SORT OF HEAT IS TO GO ON A PIC-NIC!
FEELING BRAINY TODAY?
WAR & PEACE
EVERYTHING'S BRIGHTER WHEN THE SUN SHINES - INCLUDING ME!
THE SPROGS PASS A RAMBLER
WHAT ARE YOU DOING?
THE ANTS DO LOVE A PICNIC, SO WE'RE GIVING THEM A LIFT
HAMPER
SCRATCH
SCRATCH
SCRATCH
ITCH
ITCH
THE SPROGS MEET SOME MORE PEOPLE
?
?
?
THE SPROGS JOIN THE GROUP
OF COURSE - THE ONLY THING TO DO ON A HOT SUMMERS DAY -
SET OFF FOR THE SINCLAIR PROGRAMS HOLIDAY!

**A treasure trove lies somewhere in the hall.**

**To get to it you must travel a very dangerous route, which includes crossing the moat. The cursor keys will help.**

**When you do get across, the land outside the hall is guarded by ghost patrols and, as soon as you land, a time bomb in the hall will begin to tick away, and eventually explode if you do not hurry.**

**Horror Hall was written for the 16K ZX-81.**

# SINCLAIR PROGRAMS COMPUTER HOLIDAY

**Sinclair Programs and Dolphin Holidays have combined to produce a computer holiday offer unique to this magazine.**
**All participants will have exclusive use of a Spectrum (or a ZX-81 if you so choose), help from a computer expert, access to the camp's extensive software library and to a vast variety of hardware ranging from speech synthesis systems to robot buggies.**

Also available on the camps will be an enormous range of sports and activities. Tennis, swimming, sailing and BMX bikes are just a few of the options available when you are not computing.

**The Basic Holiday: Down from £144 to £134.** This course allows you to learn programming and software applications at your own rate as you solve problems in the fantasy adventure world of our hero, Chan. There are opportunities to explore everything from Logo to machine code and robot building, all at your own pace.

**The Advanced Holiday: Down from £154 to £139.** Aimed at those with an extensive knowledge of programming, including simple machine code. The course takes you inside computers to show how they work, the particular facets of each machine's processor, operating system and memory. Other advanced computer work includes digital electronics, robot control, vision

Wellington college

ture over £30 worth of top quality software free to participants; a visit from the editorial team of *Sinclair Programs* to explain how a computer magazine is produced; on the spot evaluation of your software for inclusion in *Sinclair Programs,* visits from top games programmers and much more.

The Sinclair Program will run at Wellington College, Crowthorne, Berkshire for a week, beginning on August 3rd, 1985. It is open to all readers aged 12-17.

To apply for any of the holidays, simple complete the form below, make sure your parent or guardian has signed it, and post it to Dolphin Holidays.

See you at Wellington College!

BASIC COURSE: £134 + VAT

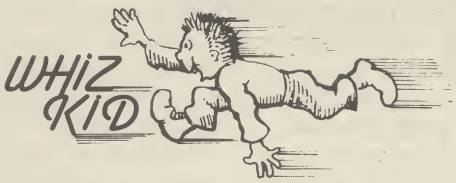
# Two tone displays jazz up any game

**Tony Rickwood deals with Spectrum colours and explains how to fill in your pictures in the fifth part of his machine code series**

SPECTRUM colours are a group of attributes, so called because they are only attributable to the main display of graphics and characters. As you know from your Basic programming, there are other attributes beside colour, namely BRIGHT and FLASH. Also, colours are attributable to both PAPER and INK, depending on whether a pixel of the screen display is on or off. This article aims to teach you how to manipulate all attributes with the help of a few small m/c routines.



Machine code is often the only practical way of controlling attributes in an arcade game. Suppose, for example, that you want to change background colour (PAPER) without changing any other attributes. In Basic, this would mean re-printing the whole screen using the new PAPER colours, with very boring results.

With machine code, we can operate directly on the attribute file, just as the scroll routines seen so far have directly manipulated the display file. A separate file is necessary because the display file can only tell the CPU whether a pixel is ON or OFF.

The attribute file occupies locations from 22528 to 23295 (5800H—5AFFH). It is easier to understand than the display file because the 768 bytes it contains have a direct relationship to the 32×24 character positions on the screen.

In other words, the bytes of the attributes file are scanned in the same sequence as characters are printed on the screen. Each attribute byte uses the first three bits (bits 0,1,2) to determine INK colours, the second three bits (bits 3,4,5) for PAPER colours. The last two bits, bits six and seven, set BRIGHT and FLASH respectively. For example, BIN 00111000 means black paper (code=0), white ink (code=7) with FLASH and BRIGHT off.

### Two-tone colour contrast

Program one lists a routine to produce a useful two-tone paper colour background, in this example

```
  10 REM Paper colours (top cyan
;bottom green)
  20 LET s=0: FOR i=64000 TO 640

```

**Program one**

using cyan top and green bottom. Enter and run the Basic and you find the LISTing of the Basic appearing in black ink on the 2-tone paper.

If you look at line 60 of the Basic, you will see that the LISTing is done before the m/c is executed (using RANDOMIZE USR as usual). This proves that the routine changes the PAPER attributes of all character positions without altering the default INK attributes. Try doing this in Basic!

If you want to use this routine in your own Basic program, just type GOTO 70 to save it to tape, and then insert a line in your program like this:
LOAD "paper"CODE: RANDOMIZE USR 64000.

The assembler uses a technique called masking. In effect, every character position has the old PAPER masked out, and the new colour masked in. Before looking at the mask itself, we need to know the codes to be masked in.

Cyan is code five. Ignoring all other attributes to be masked out, this means that we will be masking in BIN 00101000 (hex 28). Green is code 4, for which we mask in BIN 00100000 (hex 20). Line 40 sets register D initially to hold Cyan paper.

As usual, HL is a memory pointer, so in line 50, HL is set to point to the memory location immediately before the start of the attribute file.

As the screen is divided into two halves, we will be dealing with 384 character positions at a time. Using DJNZ loops, this is best thought of as dealing with 12×32 character positions for each paper.

Line 60 loads register B for the outer DJNZ loop in order to count 12 ROWs. The ROW loop starts by stacking the value of B using PUSH BC to avoid confusion with the inner loop counter, which is set up to count 32 COLumns in line 80. The inner loop proper starts in line 90. The first time it is executed will INCrement HL to

point to the first attribute byte which is then loaded into the A register in line 100.

We can now consider the mask itself. A mask hides the bits we do not want to be changed. These are the first two and the last three bits of each byte. So the binary form of a PAPER mask (where PAPER is the attribute we want to be changed) is BIN 1100011 or C7

in hex. So, ANDing the attribute byte in the A register with C7 H wipes over the attribute byte, keeping INK, BRIGHT and FLASH as they are, but wiping clean the PAPER attribute (by re-setting bits 3,4,5). This is done in line 110.

The new PAPER can be added in line 120 and the result loaded back into the attribute file in line 130. Lines 140–160 should be self-explanatory from previous articles.

The whole process from lines 60–160 has to be repeated for the bottom half of the screen to be coloured green. This is done by lines 200–210 which load register D with the new paper colour and then jump back to line 60. First, though, a test is necessary to make sure the bottom half has not already been done. In line 170, the present paper colour is loaded back into register A and compared with the value for green paper (line 180). A zero result means we can exit back to Basic using RETurn with the zero flag set.

To adapt this routine for different paper colours, it is only necessary to POKE the new colours into three locations as follows: POKE 64001,n1: POKE 64023,n2: POKE 64026,n2. n1 and n2 are top and bottom attribute values using PAPER (in decimal, these are Black=0; Blue=8; Red=16; Magenta=24; Green=32; Cyan=40; Yellow=48; White=56).

```

**Program two**

**Reversing colours**

Program two lists a routine which swaps PAPER and INK colours. For the assembler, we begin by loading the start of the attribute file into HL (line 20). Lines 30–230 contain the loop which works through all character positions. As the whole screen is being operated on, a DJNZ loop is unnecessary, as we shall see.

Line 30 sets up a mask, this time to preserve PAPER, and re-set INK, FLASH and BRIGHT. Remembering that a mask hides the bits we do not want to change, it is clear that BIN 00111000 will do the trick in this case (hex 38). By ANDing 38H with each attribute byte, we are left with just the paper bits.

Lines 50–70 are read as "Rotate Right (with Carry) contents of Register A" (RRCA). This is like RR (Rotate right) as seen in left and right scrolling, but with the important difference that the carry flag is NOT rotated, as you will see from Figure one.

By doing RRCA three times, bits five, four and three, which are the PAPER bits remaining alone in register A after the mask, are pushed down to occupy bits zero, one and two. In other words, they are changed from PAPER to INK.

Line 80 transfers the contents of the A register to the B register in order to free the A register to accept the mask which will preserve the INK digits (line 90). Any non-ink digits are masked out in line 100. To convert the remaining INK bits (0,1,2) to PAPER (3,4 and 5), they must be shifted three places to the left. The RLCA is like RRCA except in the opposite sense, and is used three times in lines 100–130 to get the left shift.

We now have two bytes of data, one holding the transposed INK digits in register B, the other holding the transposed PAPER digits in register A. By ADDing A, B in line 140, we arrive at the reversed INK/PAPER combination.

There remains the problem of what to do about the other attributes. If any have been specified then we want them to remain intact. So again, the B register is used as a temporary store in line 150, while PAPER and INK bits of the attribute byte are masked out in lines 160–180. Obviously, the two remaining bits need not be manipulated, so all we now have to do is ADD them to the PAPER/INK combination in register B (line 180).

Now we are finally holding the new attribute byte in register A, we can replace the old for the new in the attribute file by LD (HL), A in line 190. the HL memory pointer is INCremented in line 200 ready for next attribute byte. As the whole screen is being done in one go, and we know that attribute bytes range from 5800H-5AFFH, once the H register contains 5BH, then the last byte has just been processed. If it is not (non-zero using CP), then this test causes the routine to jump back for the NEXT attribute byte (else RETurn to Basic).

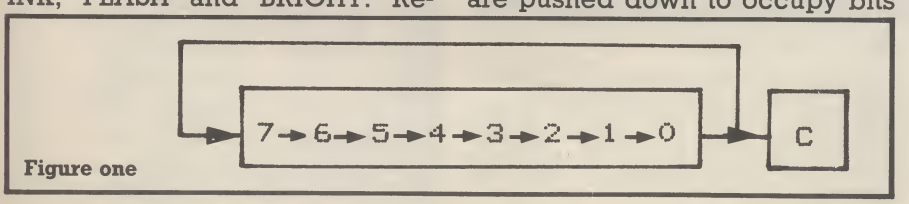

**Figure one**

# SUPERTE

## The inside s

OCEAN are hoping for another great summer for Daley Thompson as they put Britain's top athlete through his paces in a super test.

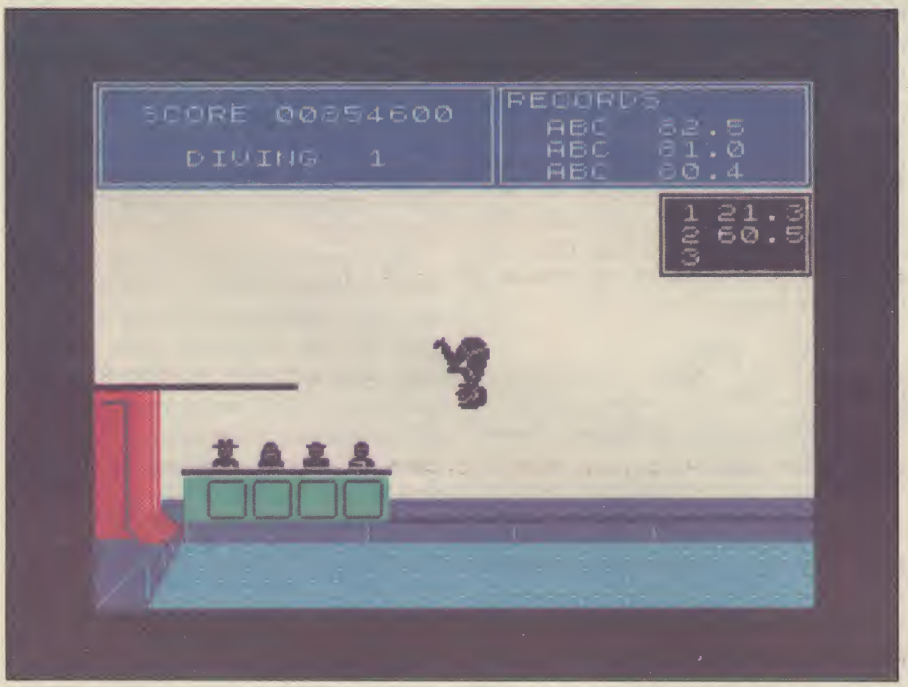
**Daley Thompson's Super Test** will be released shortly and, like its predecessor, **Daley Thompson's Decathlon,** it will contain a wide variety of sporting events.

Decathlon was based on the Olympic games with the ten Decathlon events reproduced in the program. Arcade scenes showed our hero Daley in a stadium packed with spectators cheering whenever he was successful. With each event a board displayed score, qualifying times, energy scales and, for the jumping and throwing, an angle scale.

All the running events were controlled by continuous left to right joystick movement or by alternately pressing two keys on the keyboard. Events such as the 400 metres were extremely taxing and most of us found that midway through this event coordination of our hands and eyes were stretched to new and hitherto unknown limits.

The 1500 metres, known to be an event disliked by Thompson, had an additional scale representing energy. It was not enough in this event to make him run the distance as fast as possible; run too fast and his energy was quickly drained; too slowly and he did not qualify.

Each event required visual coordination. In the long jump, for example, Daley had to run to the take-off line then you controlled the action by depressing a key which held him until the angle scale was at a desired position and released the key. If you timed it correctly, Daley sailed through the air and landed beautifully in the sand.



All the events placed their own separate demands upon our playing ability, with my vote for the most punishing going to the 400 metres.

Events took place over two days and, when you eventually qualified in all of them you were rewarded with a scene depicting Daley upon the winners' box, wearing a gold medal and being serenaded with the theme tune from **Chariots of Fire.**

Ocean have been delighted with the response to Decathlon and in producing Daley Thompson's Super Test they have been able to develop some of the ideas which they were unable to use in the first program.

There are eight new events in Super Test, all of which use the same type of continuous keyboard or joystick control used in Decathlon.

Super Test contains a high dive event in which Daley, under your control, runs along the diving board; you press the key to make him jump and press again to make him somersault in mid air as many times as possible and land vertically in the water. Get it wrong and Daley will do a belly flop.

The scene shows the pool and a panel of judges displaying the score on a board in front of the judging box.

In the tug-a-war Daley is a member of a team of four, battling against another team. Degree of strength; light, medium or bantam, can be selected at the start.

The screen will display a force scale and a time limit may be used if Ocean feel the game is still a little too easy!

The pistol target shows only Daley's head, together with a firing range with four targets that swing in and out of range, and the gun sight with which you take

# EST...

## ...story

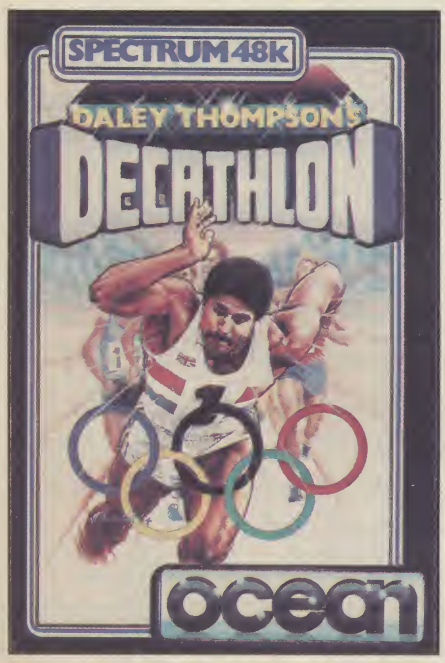
aim.

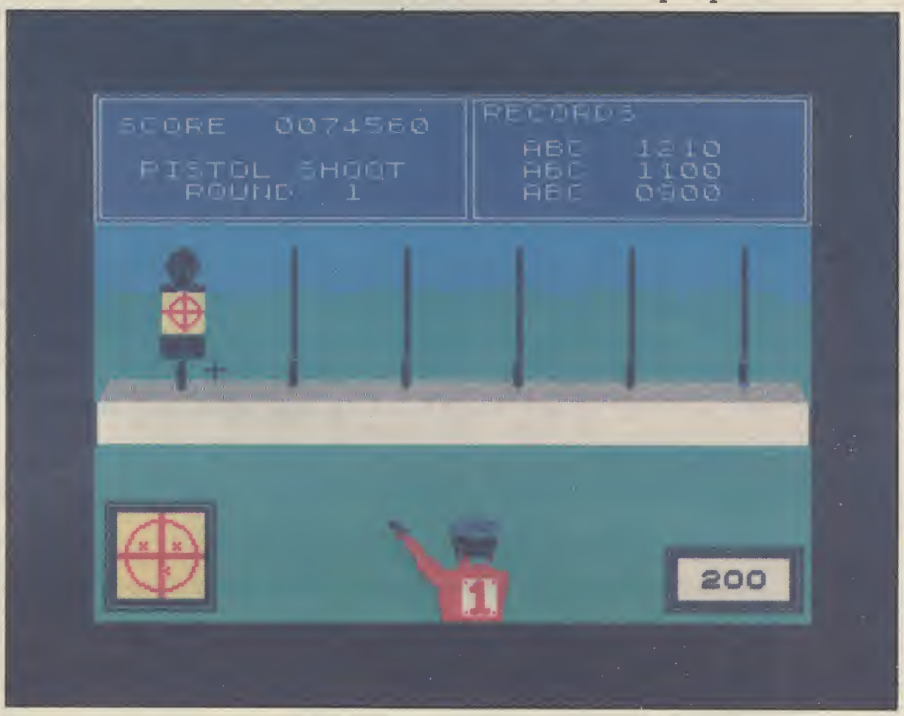
A bird's eyeview shows the rowing contest with three canoes, one belonging to Daley, sitting on the water. Using the two keys, joystick you must make him go as fast as possible. However, to make it truly competitive and sufficiently hard, the speed of all the other canoes is determined by your own pace; after all, if you are too slow the other canoes may quickly move out of sight.

The cycling event involves Daley racing along on a bike, and this one has been designed to be as gruelling as the 400 metres in the Decathlon.

Next, the slalom run has Daley skiing along the course, zig-zagging through the flag poles. It is your job to get him past the obstacles safely. You view the scene from in front of Daley.

There are two skiing events, the second being the ski jump. This time you watch from the side as Daley races down the ski run under your control and you make him jump before he reaches the end of the slope.





Finally, a goal scoring match sets Daley on the football pitch. You make him run up to the ball and kick it at the goal, which is guarded by a goalie who will dive at it.

A very important change has been made to the Daley character from the original and he is now shown as a black man instead of white. Ocean describe the former misrepresentation as an 'oversight' which public criticism has inspired them to correct.

Ocean are admired because of their original ideas. David Ward, managing director, smiled at the suggestion that he is the brilliant mind behind the success of the company.

"We don't have a single creative form," he said, "and are always open to new ideas and actively encourage amateur programmers to use our expertise and resources. For many the marketing and general work involved in producing software is daunting. If anyone comes to us with an idea we will help them. We don't just see ourselves as a software house, but as a publishers. People go to them with manuscripts and they publish a book for those people. This is the role in which we see ourselves and this is the direction that our industry must take. This encouragement of new ideas in turn produces further cross media fertilisation."

All the games produced by Ocean are written in Machine Code; initally on a larger business computer. Paul Owens, who has written many of the Spectrum games, explained: "Most software houses have to do this. Programs nowadays require every inch of the machine's memory and this leaves very little space for expanding on ideas and experimenting with different angles. We can store the detail on the bigger computer thereby allowing us greater flexibility to try out new ideas."

Although Ocean are barely two years old they have a string of hit games such as the **Hunchback** games, **Gift from the Gods, Match of the Day** and **Kong.** They are preparing to release at least six new games throughout the summer, including titles such as **Frankie goes to Hollywood** and **Street Hawk.**

# WHAT MAKES VIRTUALLY EVERY HOME COMPUTER CLICK?

Simple! A fully compatible printer or to be more precise the DWP1120 from Quen Data.

The DWP1120 is a real value for money, letter quality daisy-wheel that's so versatile, it can be interfaced with virtually any micro on the market.

Originally designed for professional users, the DWP1120 combines stylish good looks with total practicality. With features you'd only expect to find on much more expensive machines it's a powerful companion for any home micro, giving you complete word processing, documents and data listing facilities all at the touch of a button. In fact, whatever your particular printing requirements, the Quen Data DWP1120 is almost certain to make your computer click . . .

JUST SOME OF THE POPULAR MICROS EASILY INTERFACED WITH THE DWP1120

*SPECTRUM
BBC
*COMMODORE 64
ORIC

SINCLAIR QL
*Special interface.

SPECIFICATIONS

Printing speed of 18 cps, bi-directional and logic seeking.
Exchangeable 96 character print wheels.
Friction feed as standard, tractor feed and single sheet feed are easily attached options.
Interface examples; either 8 bit parallel/ centronics, or RS232C/V 24 on Sinclair QL or standard centronics.
Characters per line, 120c-15p with character spacings of 10.12.15 pitch and proportional spacing.
CONTACT ANY OF THE DEALERS LISTED BELOW OR QUEN DATA DIRECT FOR FULL SPECIFICATION DETAILS.

FLEXIBILITY AT THE TOUCH OF A BUTTON

★ HOME CORRESPONDENCE
★ BUSINESS USE
★ DOCUMENTATION
★ WORD PROCESSING

Instantly compatible with sophisticated word processing programmes such as Tasword 2, Wordwise and Wordstar, etc.
12 months full replacement warranty
DWP1120 RRP £295 or less
Also available: the DP1100 and shortly available a complete new range of competitively priced Dot Matrix printers.
Dealer enquiries welcome.

# Dear Diary

I'm exhausted. This month has seen the first ever attempt by yours truly to write a proper, full-scale, traditional technical advice column for the magazine.

I suppose I got involved this time because the problem was about Pacman. Experts like me think computer games should provide the maximum in fear and aggression. Pacman does it by changing you between chasing and being chased; that's why it's a classic.

Anyway, I wondered, how does the ghost find you in the Pacman maze?

I started off with a maze of cyan squares on white paper.

```
10 FOR y=1 TO 11: FOR i=1 TO 16: PRINT PAPER 5; '' ''
;PAPER 7;'' '';: NEXT i: PRINT ,,: NEXT y
```

The next two lines set up and then print the start position of Pacman and the monster.

```
20 LET px=3: LET py=3: LET mx=27: LET my=15:
LET n=0
25 PRINT AT py,px;''P''; AT my,mx;:''M'': LET
pyy=py: LET pxx=px: LET myy=my: LET mxx=mx
```

The pyy and mxx stuff in line 25 records the old position of the two characters. I'll explain the n in line 20 in a minute

```
30 LET px=px+(px<30)*( INKEY$ =''8'')-(px>0)*( INKEY$ =''5'')
40 LET py=py+(py<20)*( INKEY$ =''6'')-(py>0)*( INKEY$ =''7'')
```

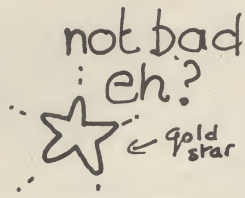
These two fancy lines use control keys 8, 5, 6 and 7 to change Pacman's position. The bit about >20 and <30 and >0 stops you falling off the screen.

```
50 IF ( ATTR (py,px))=40 THEN LET py=pyy:
LET px=pxx: GOTO 30
60 PRINT AT pyy,pxx; '' ''
```

Line 50 checks for walls by throwing you back onto your old square if ATTR is 40 (8* the paper colour for cyan). If you do move, then line 60 obliterates the old P.

The rest of the program controls the monster, though (by alternating the value of n between 0 and 1 in line 65) only every two moves of the Pacman.

```
65 LET n= NOT n: IF NOT n THEN GO TO 25
70 LET mx=mx+(px>mx)*(mx<30)-(px<mx)*(mx>0): IF
( ATTR (my,mx)=40) THEN LET mx=mxx
80 LET my=my+(py>my)*(my<20)-(py<my)*(my>0): IF
( ATTR (my,mx)=40) THEN LET my=myy
100 PRINT AT myy,mxx; '' '': IF my=py AND mx=px
THEN PRINT AT my,mx; ''*'': STOP
110 GO TO 25
```



The extra bits about px>mx and py<my and so on in lines 70 and 80 are to home in the monster onto the Pacman. If he gets caught, then line 100 prints a *.

Anyway, by the time I'd done all this work I was pretty annoyed to hear my sister Eustacia demanding some of the Sinclair Programs money because she'd ''helped'' me with the Pacman program.

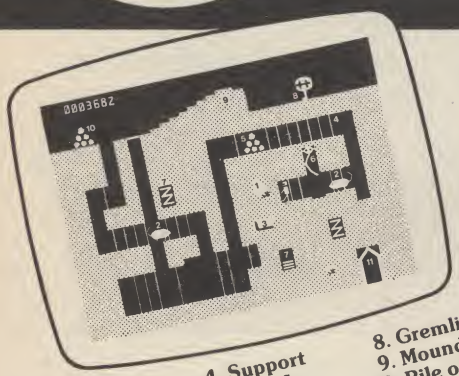
As I told her, if she really had helped me then I'd certainly admit it. After all, I'd never lie about something as important as Pacman.

# LOOK!

SOFTWARE FARM

# NOW THERE ARE 3

## HI-RES PROGRAMS FOR THE 16K ZX-81



1. Nuggets
2. Giant Rats
3. Burrowing Rat
4. Support
5. Cave In
6. Snake
7. Snake Nest
8. Gremlin
9. Mound
10. Pile of Earth

## FORTY NINER

In 1849 the Great American Gold Rush started. Almost everyone who could sold up everything and dashed to the west coast to look for this precious metal – including you!

You must excavate this precious metal – but can you survive the giant rats and that vicious Gremlin which will come to infest your mine? Can you trick the snakes into leaving their comfortable nests and destroy the rats for you? Can you keep the Gremlin at bay?

Riches await you – but so do the hazards!

## ROCKET MAN

Get rich quick by collecting Diamonds that are simply lying there waiting for you!

Oh . . . I forgot to mention that there are one or two problems!

There is an expanse of shark infested water between you and the Diamonds and a strange breed of Bubble that seems hell bent on getting you in it! Somehow you must cross it . . . .

You have a Rocket Pack to help you (a Vulture on higher levels) but you must rush around the platforms and ladders collecting cans of fuel (legs of lamb with the Vulture) and cursing that weird Bubble. Once you have enough fuel then it's Chocks Away!

Oh . . . but don't run out of fuel on the way – otherwise it's . . . SPLASH!

## Z-XTRICATOR

A long time ago, in a galaxy far, far, away a terrible war took place between two hostile races. Any prisoners taken could not expect to live very long in the hands of their captors. Their only hope lay with a group of valiant warriors – the XTRICATORS – whose task it was to rescue fellow beings from the alien planet's surface. You are about to take on the role of such a warrior . . . .

**Please send me:**

| | | QTY | TOTAL AMOUNT |
|---|---|---|---|
| FORTY NINER | £5.95 | | |
| ROCKET MAN | £5.95 | | |
| Z-XTRICATOR | £5.95 | | |
| | | TOTAL | |

**Available from all good computer shops or send cheque/P.O. for £5.95 (inc. P&P) to:**

**Software Farm,**
**FREEPOST (No stamp required) (BS3658),**
**BS8 2YY.**

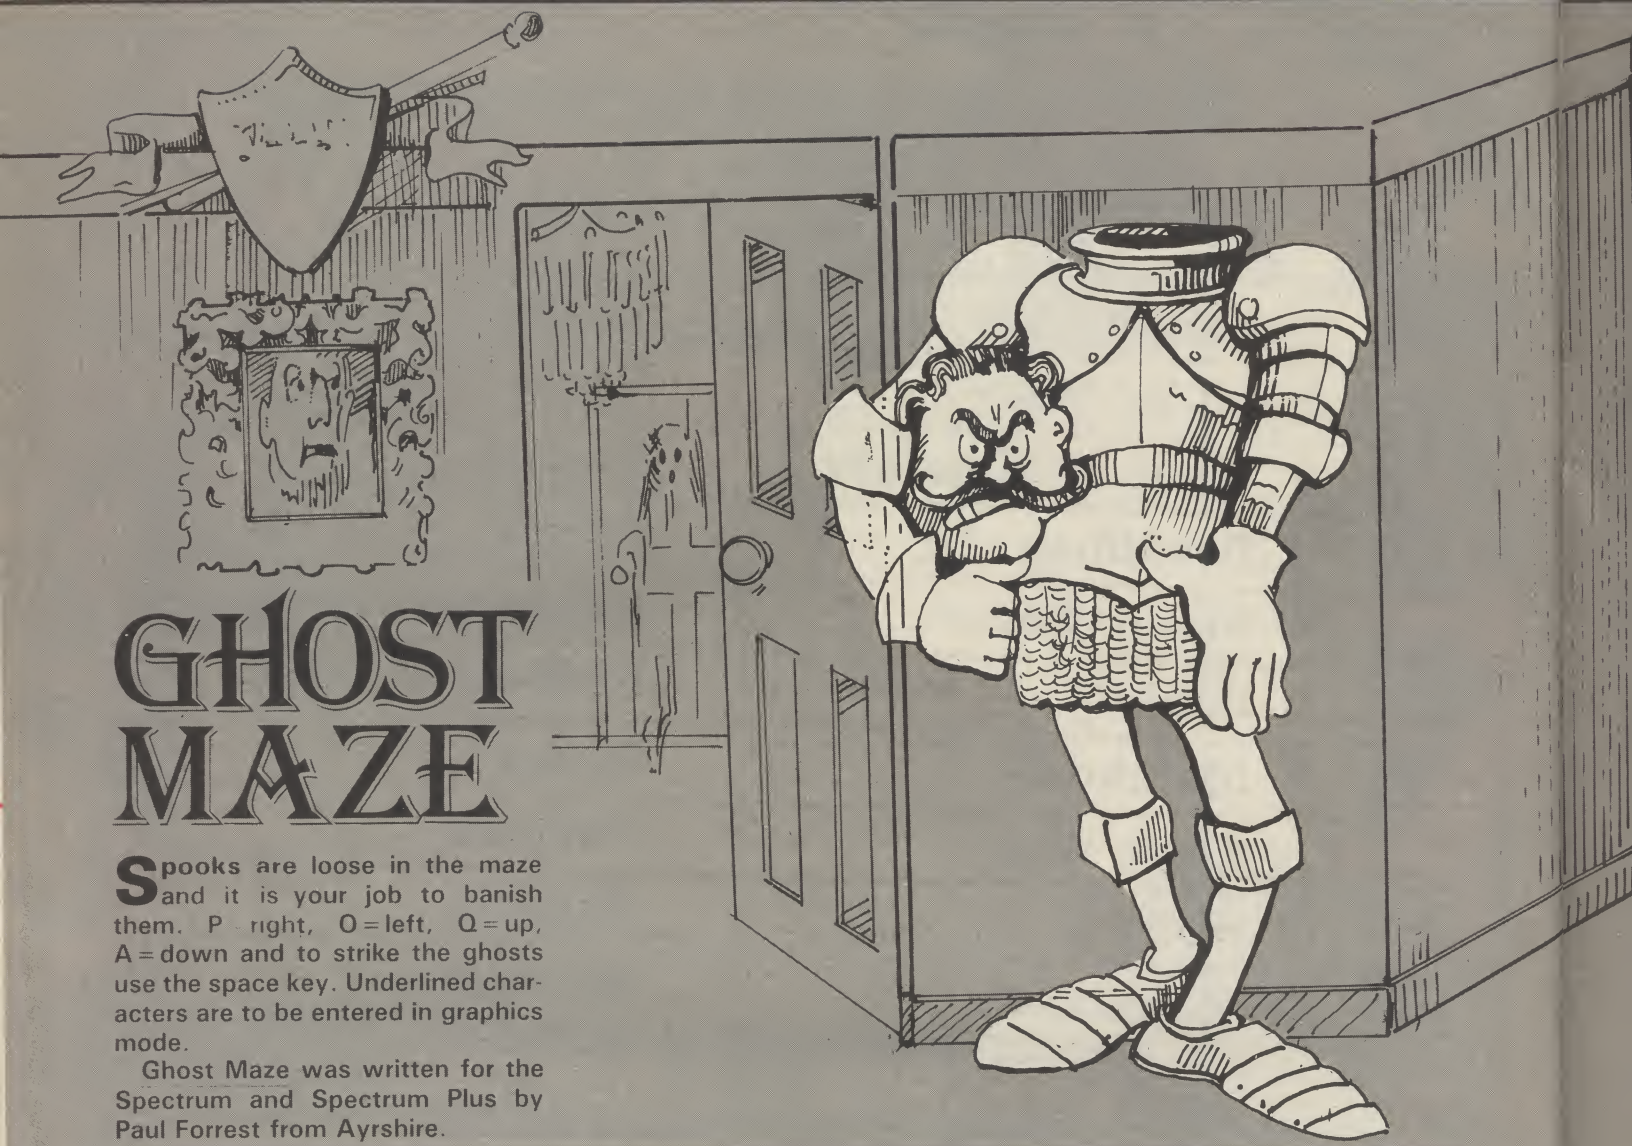
To register your votes, let us know the program you like most, and the program you hate most. Add your name and address, which will make you eligible for the £10 chart prize. Send your votes to CHARTLINE, Sinclair Programs, Priory Court, 30-32 Farringdon Lane, London EC1R 3AU.

Winner of this month's chart prize is Alexander Turnbull of Edinburgh, Scotland.



# GHOST MAZE

**S**pooks are loose in the maze and it is your job to banish them. P = right, O = left, Q = up, A = down and to strike the ghosts use the space key. Underlined characters are to be entered in graphics mode.

Ghost Maze was written for the Spectrum and Spectrum Plus by Paul Forrest from Ayrshire.

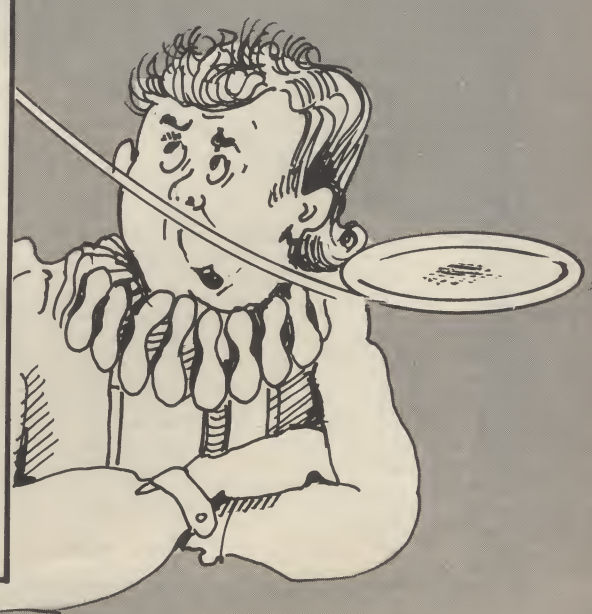
**You are a prince, and your mission is to save the princess from a wicked spell. The spell has made her hate all princes, and so she is throwing plates at you to drive you away. The only way to break the spell is to kiss the princess.**

**Spell Breaker was written for the Spectrum or Spectrum Plus by James Foggo, aged 13 of Worthing, West Sussex.**



# DARTS

**Try to reach the highest score on the dartboard. This multi-player game allows each player three chances to reach the winning score. When the dart appears, press the space key when you think it is at the right position, and the dart will be fired.**

**Darts has been written for the Spectrum and Spectrum Plus by Anthony Pope from Gloucester. Underlined characters are to be entered in graphics mode.**

# We can't show you all the views of the Lords of Midnight, there are 32,000!

We've invented a new programming technique called Landscaping, creating a completely new kind of game, the EPIC.

You'll get the chance to shape the characters into your own fantasy novel by playing out the different roles in the ever changing world of Midnight.

# THE FINAL TOUCH

We've just added the final touch to our professional keyboard.
This new Microdrive compatible keyboard offers more key functions than any other in its price range. And the stepped keys and space bar make it even easier to use.
Our keyboard, constructed from high density black ABS, will take your Spectrum into the professional league.
It has 52 "stepped" keys plus space bar. A separate numeric key pad consisting of 12 red keys including a single entry 'delete' plus single entry 'decimal point', facilitate fast numeric data entry.
The 15" x 9" x 3" case will accommodate your Spectrum and other addons like interface 1, power supply etc. and forms an attractive self-contained unit.
All connections, power, Mic, Ear, T.V., network RS232 and expansion port are accessible at the rear.
A few minutes, a screwdriver and the simple instructions supplied are all you need to fit your Spectrum.
All dk'tronics products are covered by a comprehensive guarantee.

ONLY £45.00
